Thirty Years of Literacies Testing at the University of Cape Town Alan Cliff, 2024-05-10 This book delves into extensive research regarding the identification and characterization of academic literacies constructs encompassing academic literacy quantitative literacy mathematics comprehension and reasoning skills with a specific focus on their relevance within South

African educational contexts The volume provides an in depth exploration of the research behind the design and creation of assessments aimed at gauging these crucial literacies It also delves into theoretical aspects of developmental work while shedding light on historical and contemporary inequalities in the South African educational landscape Emphasising the practical implications of this research the book underscores the pivotal role that assessing academic literacies can play in the equitable selection of students particularly those hailing from educationally disadvantaged backgrounds Additionally it highlights how such assessments can inform higher education responsiveness curriculum development programme implementation and the provision of support services for students ultimately aiding in informed student placement decisions

Mosfet Modeling For Circuit Analysis And Design Carlos Galup-montoro, Marcio Cherem Schneider, 2007-02-27 This is the first book dedicated to the next generation of MOSFET models Addressed to circuit designers with an in depth treatment that appeals to device specialists the book presents a fresh view of compact modeling having completely abandoned the regional modeling approach Both an overview of the basic physics theory required to build compact MOSFET models and a unified treatment of inversion charge and surface potential models are provided The needs of digital analog and RF designers as regards the availability of simple equations for circuit designs are taken into account Compact expressions for hand analysis or for automatic synthesis valid in all operating regions are presented throughout the book All the main expressions for computer simulation used in the new generation compact models are derived Since designers in advanced technologies are increasingly concerned with fluctuations the modeling of fluctuations is strongly emphasized A unified approach for both space matching and time noise fluctuations is introduced

Photonic Devices for Telecommunications George Guekos, 2012-12-06 This book is subdivided into three main Parts The common spirit in these parts is to provide at the beginning of each a comprehensive introduction into the subject treated followed by specific aspects pertaining to the modelling and or measuring particularities arising from the investigation of photonic devices for telecommunications Some of the devices treated here can be considered as widely known and well established Others are rather new and their potential for applications is not yet fully exploited The methods to model and measure photonic in this book and the comparison of results obtained devices and structures outlined by applying such methods are likely to interest both the engineer investigating the of a device in a system and the engineer looking for new ways to explore behaviour the possibilities offered by emerging devices Many authors have contributed to this book There are two main reasons for this in photonic device research modelling First the book addresses two broad fields and measurements for which a vast knowledge exists in many research groups that was not integrated in a book before Second a significant number of laboratories decided to closely co operate in order to gain additional information on merits and drawbacks of their own methods for simulation and experimentation of devices as compared to the methods used by their colleagues in other laboratories The outcome are new aspects and approaches that would not have been investigated in the absence of a framework for a co operative programme
