Complex Structure and Dynamics of the Heart Philip Bittihn,2014-12-27 This award winning thesis investigates the mechanisms underlying cardiac arrhythmia development and termination from an entirely new perspective By viewing the heart as a complex system the author uses theoretical tools from nonlinear dynamics combined with numerical simulations and experiments to achieve insights into the relationship between its structure and dynamics thereby paving the way towards innovative low energy defibrillation strategies The work tackles among other things the effect of substrate heterogeneity on the spatial temporal dynamics of cardiac arrhythmias and ways in which weak pulsed electric fields can be used to control these dynamics in heterogeneous cardiac tissue The long term vision of this research is to replace the current strategy of applying painful and sometimes tissue damaging electric shock currently the only reliable way to terminate life threatening fibrillation by a more subtle but equally effective intervention The book maps out a number of promising research directions for biophysicists and medical researchers working on the origins and treatment of cardiac arrhythmias *Human Biology Activities Kit* John R. Roland,1993-08-05 This collection of over 200 classroom tested activities and reproducible worksheets for students in grades 7 through 12 covers vital concepts in human biology and health including extensive coverage of AIDS These high interest lessons and worksheets get students actively involved in learning even students who are poorly motivated learning disabled or who lack English proficiency The lessons are written so you can easily accommodate your students various learning styles whether it is visual auditory and tactile Each lesson helps students make connections between new material and concepts they are already familiar with The book features 11 units covering all the body's systems such as circulatory digestive and immune systems and offers a detailed look at cells bones muscles and more Each unit provides enjoyable hands on activities that engage secondary students from building a cell model and testing foods for carbohydrates to dissecting a frog and making an action cartoon of a macrophage battling a microorganism For convenience the lessons are printed in a big spiral bound format that folds flat for photocopying
