ANATOMY AND PHYSIOLOGY

Anatomy refers to the **internal and external structures** of the body and their physical relationships, whereas **physiology** refers to the study of the **functions of these structures**.

LEVEL OF STRUCTURAL ORGANIZATION OF THE BODY

When studying the human body, one can look at the structure and function at various levels:

Atoms, molecules and compounds -

The body is composed of atoms.

Atoms → Molecule → Compounds.

Cell level -

Molecules form organelles. Some of the basic functions of cell are growth, metabolism, irritability and reproduction.

Tissue level -

Organ level - Different tissues combine to form organs.

Organ system level - Organs make up an organ system.

Anatomy And Physiology Class Description:

The Not-So-Intelligent Designer Abby Hafer, 2016-09-29 Why do men's testicles hang outside the body? Why does our appendix sometimes explode and kill us? And who does the Designer like better anyway, us or squid? These and other questions are addressed in *The Not So Intelligent Designer*. Dr. Abby Hafer argues that the human body has many faulty design features that would never have been the choice of an intelligent creator. She also points out other animals that got better body parts which makes the Designer look a bit strange, discusses the history and politics of Intelligent Design and creationism, reveals animals that shouldn't exist according to Intelligent Design and disposes of the idea of irreducible complexity. Her points are illustrated with pictures by Alexander Winkler with wit and erudition. [The Hidden Curriculum—Faculty-Made Tests in Science](#)
