 - provides a barrier that restricts movement of large molecules from underlying connective tissue into epithelium

4. Why must epithelia be continually repaired? How is it repaired?

Epithelia must be continually repaired because it physically protects the tissues underneath it. It is repaired by stem cells lying near the basement membrane.

5. How do we classify epithelia?

By the number of layers and the cell shape

6. Give the function of each epithelia type listed below and give an example of where it is found:
