Cliff Ollier, Colin Pain, 2004-08-02 The Origins of Mountains approaches mountains from facts about mountain landscapes
rather than theory The book illustrates that almost everywhere mountains arose by vertical uplift of a former plain and by a
mixture of cracking and warping by earth movements and erosion by rivers and glaciers the present mountainous landscapes
were created It also gives evidence that this uplift only occurred in the last few million years a time scale which does not fit
the plate tectonics theory Another fascinating part of the evidence shows that mountain uplift correlates very well with
climatic change Mountain building could have been responsible for the onset of the ice age It certainly resulted in the
creation of new environments Fossil plants and animals are used in places to work out the time of mountain uplift which in
turn helps to explain biogeographical distributions *CUET PG Geology, Earth Science - Question Bank (2400 MCQs
