ENC Focus ,2000 New Horizons in Mathematics and Science Education ,2001 Multiple Representations in Chemical Education John K. Gilbert, David Treagust, 2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education *Developing a Didactic Framework Across and Beyond School Subjects* Søren Harnow Klausen, Nina Mård, 2023-12-22 Centered around a contemporary conception of Bildung this book effectively demonstrates how the aims of cross and transcurricular teaching can be reconciled resulting in a didactic framework for teaching and learning in secondary schools that can be applied internationally Chapters present a nuanced and unified approach to fusing theory and practice by offering accounts of some of the most promising teaching methods from leading scholars in the field of curriculum research These methods include dialogic teaching or movement integration transversal competences like digital or entrepreneurial thinking and topics that call for crosscurricular approaches like sustainability or citizenship Addressing diverse worries and criticisms of crosscurricular teaching the book includes international viewpoints and trends such as sustainability citizenship and student motivation to present a comprehensive and systematic scholarly treatment of crosscurricular didactics within the classroom It further addresses important challenges that have been widely ignored like how to evaluate crosscurricular work Ultimately this volume makes a highly novel contribution to the field of crosscurricular didactics and will be of interest to researchers scholars and academics in the fields of secondary education teaching and learning educational science and curriculum design Those interested more broadly in the theory of education will also find the volume of use The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license **Successful Remembering and Successful Forgetting** Aaron S.
