Transforming Curriculum Through Teacher-Learner Partnerships Nair, Pradeep, Keppell, Michael James, Lim, Chee Leong, Mari, Tamil Salvi, Hassan, Nurhanim, 2020-12-11 Empowering learners for life requires a fundamental shift in higher education curriculum design. New priorities, pedagogies, technologies, spaces, and assessment strategies are required to enable learners to take ownership of their learning. Student-centeredness concepts are still prescriptive in nature as most decisions on curriculum, assessment, teaching, and learning approaches are still teacher-centric. Teachers are developing student-centered learning environments without the involvement of the learners in the planning, decision-making, and/or design process. In addition, some lecturers are still practicing the traditional approaches of content delivery and conventional assessment methods rather than experimenting with innovative practices suited for student-centered approaches. Therefore, there is an ongoing need for research focused on the importance and effectiveness of a paradigm shift in education that involves student-teacher partnerships fueled by innovative teaching and learning designs where students take an active role and contribute as partners in learning. *Transforming Curriculum Through Teacher-Learner Partnerships* captures experiences and evidence among teachers in exploring the possibility of active student participation in curriculum design, delivery, and assessment through teacher-learner partnership. The chapters address issues of teacher-learner partnerships in designing the learning environment and how student-centered methods create resilient, adaptable, and future-capable learners. While highlighting topics within this scope such as learner autonomy, learning performance, self-efficacy, and teaching pedagogy, this book is ideally intended for teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in issues related to the teacher-learner partnership.

Intelligence Measurement and School Performance in Latin America Carmen Flores-Mendoza, Rubén Ardila, Ricardo Rosas, María Emilia Lucio, Miguel Gallegos, Norma Reátegui Colareta, 2018-06-20 This book presents the results of the most complete and updated assessment of cognitive resources of students in Latin America. The Study of Latin

American Intelligence SLATINT During four years top researchers of the region used a standardized set of cognitive measures to assess 4 000 students aged between 14 and 15 years from six countries Brazil Argentina Mexico Chile Colombia and Peru The data collected and now analyzed in this volume is a first step to understand the human cognitive capital of the region a crucial resource for any country today Intelligence research has shown that the cognitive skills of a population are strongly associated with the school performance of its students and the development of a nation This makes Intelligence Measurement and School Performance in Latin America a valuable tool both for Latin American researchers and authorities engaged in the improvement of each country s human resources and for psychologists educators and other social scientists dedicated to the study of the impact of intelligence in the development of nations

DIFFERENTIAL EQUATIONS B. R. THAKUR,HARI KISHAN, MATHEMATICS GANIT RAM PRASAD RP UNIFIED THAKUR KISHAN Abstract Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts

New Methods in Cognitive Psychology Daniel Spieler, Eric Schumacher, 2019-10-28 This book provides an overview of cutting edge methods currently being used in cognitive psychology which are likely to appear with increasing frequency in coming years Once built around univariate parametric statistics cognitive psychology courses now seem deficient without some contact with methods for signal processing spatial statistics and machine learning There are also important changes in analyses of behavioral data e g hierarchical modeling and Bayesian inference and there is the obvious change wrought by the advancement of functional imaging This book begins by discussing the evidence of this rapid change for example the movement between using traditional analyses of variance to multi level mixed models in psycholinguistics It then goes on to discuss the methods for analyses of physiological measurements and how these methods provide insights into cognitive processing New Methods in Cognitive Psychology provides senior undergraduates graduates and researchers with cutting edge overviews of new and emerging topics and the very latest in theory and research for the more established topics
