(Class – XII)

Question 9:

Please explain Lewis Thurstone's theory of primary mental functions.

Answer 9:

According to Lewis Thurstone, intellect consists of his seven main abilities, each relatively independent. These key skills are:

- language comprehension (understanding the meaning of words, concepts and ideas);
- numerical skills (speed and accuracy of numerical and arithmetic skills);
- spatial relationships (visualization of patterns and shapes);
- perceptual speed (the speed at which you perceive details);
- Word Fluency,
- memory (accuracy in retrieving information) and
- inductive reasoning (drawing general rules from presented facts);

Long Answer Type Questions

Question 1:

Could you briefly describe the multiple intelligences identified by Gardner?

Answer 1:

According to Gardner, intelligence is not a single entity. There are indeed many different types of intelligence.

Here are some key points about Gardner's thoughts on multiple intelligences.

- Intelligence is independent of each other.
- Different kinds of intelligence interact and work together to find solutions to problems.

Mr. Gardner has identified eight types of intelligence in him. Here are the details: Poets and writers are very linguistically intelligent. Logical-Mathematical skills mainly possess problem solving ability, very high on thinking logically, good at abstract reasoning and can solve mathematical problems with ease. Scientists and Nobel prize winners are good examples with Logical-Mathematical Intelligence.

Spatial skills are about understanding visual images and patterns. It refers to the ability to form, use and transform mental images. A pilot, a sailor, a sculptor, a painter, an architect, an interior his designer, a surgeon may have a highly developed spatial intelligence.

The Musical Skill provides a more detailed understanding of creating, creating, and manipulating musical patterns. A person with this intelligence is very sensitive to sound and vibration, and very sensitive to creating new sound patterns.

Physical-Kinaesthetic Using the whole body to solve a problem or assemble a product. Athletes, dancers, actors, athletes, gymnasts, and surgeons may possess such intelligence. Organize your feelings and build comfortable relationships with others. Psychologists, counselors, politicians, social his workers, and religious leaders are likely to have high levels of interpersonal intelligence, and philosophers and spiritual his leaders show examples of this kind of intelligence, increase.

Naturalistic skills involve recognizing relationships with the natural world. That is, analyzing the beauty of existing species, flora and fauna. Hunters, farmers, tourists, botanists, zoologists, and birdwatchers have a more naturalistic intelligence.

What Happened in the Garden Abner Chou, 2016 Evangelicals are no strangers to the creation versus evolution debate Now the argument has spread beyond the contents of the creation account and into Genesis 2 3 with speculation about the historicity of Adam and the fall But does it matter which position one holds Is anything really at stake The faculty of The Master s College come together to contend that the second and third chapters of Genesis are indeed historical that there are excellent reasons for believing so and that it is an essential issue within Christian thought and life The contents of these chapters establish the history of how everything in the world came to be what it is today This Scripture passage Genesis 3 especially explains what we observe in the legal system literature gender roles education psychology and science Far from irrelevant the theology and historicity of Genesis are in fact critical to our everyday lives

What Happened in the Garden includes new scientific literary business educational and legal perspectives on creation Through this multidisciplinary look at the debate the contributors prove that to change our understanding of the fall is to change the way we understand reality to revise the Christian worldview and to reshape the faith itself

The Psychology Of The Brain Philip Dammen, 2023-12-02 For more information on The Psychology of the Brain and Linguistic Brain Therapy <https://brainpsychology.pro> The Most Important Knowledge and Findings The central ideas behind the books on brain psychology and linguistic brain therapy are aimed at helping psychologists psychiatrists therapists health workers family members and clients gain knowledge and methods to reduce or eliminate mental disorders This leads to a better life for clients and more secure satisfied therapists Therapists and psychologists who achieve good results can confidently continue

their treatment as before while gaining a scientific understanding of the mental changes in their clients as they improve from the treatment Therapists who are not as successful can now acquire scientifically grounded knowledge on how to achieve better outcomes Family members will gain knowledge about mental disorders enabling them to more effectively help their children Those suffering from mental disorders can acquire knowledge and techniques that can alleviate their condition and create a life with less mental pain These goals are achievable because the books on brain psychology and linguistic brain therapy contain scientific knowledge about the mental constructs that anchor and trigger mental distress or well being They also provide insights into how to protect against mental pain and manage it in the best possible way

The Significance of Research

Early in my therapeutic practice several clients achieved amazing results that psychology could not explain This led to the initiation of an extensive research project The research was met with skepticism as many believed it was impossible to investigate what After 9 years of analyzing mental processes in clients I discovered how mental disorders are mentally constructed and the mental changes clients experience when they improve from treatment One conclusion was that all mental disorders can be cured using words though it may take time These findings represented a solution to challenges that psychology and psychiatry had been trying to solve for over 150 years

Significant Discoveries

I found that mental disorders are mentally constructed more simply than previously believed by researchers psychologists and psychiatrists It is possible to investigate mental processes leading to mental distress and the experience of mental distress solely through words Mental well being and mental disorders are constructed of the same mental or mental biological material and in the same manner allowing the same methods to be used to treat mental disorders such as anxiety depression and schizophrenia as well as to develop mental well being and skills

I Now Know for Sure

I am now certain that knowledge of brain psychology and linguistic therapy can lead those with mental distress to take more control over their emotions and mental problems Additionally psychologists and health workers can treat clients with greater scientific certainty and predictability achieving faster and better results The most reliable evidence of this includes success stories from clients comments from international scientific journals and observations from colleagues who have observed my work with students mental distress over many years After 30 years of research and treating more than 1000 clients I am convinced that linguistic brain therapy not only helps individuals but also enables those who have studied the books to help others whether as clients parents leaders trainers or other psychologists
