Regulating Genetically Modified Crops in View of Environmental Risks Ancui Liu, 2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China's GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities

sequestration potential they are widely applicable and easily adopted and thus have excellent potential to mitigate climate change if practiced on a global scale Likewise grazing systems such as silvopasture are easily replicable don t require significant changes to human diet and given the amount of agricultural land worldwide that is devoted to pasture can be important strategies in the carbon farming arsenal But by far agroforestry practices and perennial crops present the best opportunities for sequestration While many of these systems are challenging to establish and manage and would require us to change our diets to new and largely unfamiliar perennial crops they also offer huge potential that has been almost entirely ignored by climate crusaders Many of these carbon farming practices are already implemented globally on a scale of millions of hectares These are not minor or marginal efforts but win win solutions that provide food fodder and feedstocks while fostering community self reliance creating jobs protecting biodiversity and repairing degraded land all while sequestering carbon reducing emissions and ultimately contributing to a climate that will remain amenable to human civilization Just as importantly to a livable future these crops and practices can contribute to broader social goals such as women s empowerment food sovereignty and climate justice The Carbon Farming Solution is at its root a toolkit and the most complete collection of climate friendly crops and practices currently available With this toolkit farmers communities and governments large and small can successfully launch carbon farming projects with the most appropriate crops and practices to their climate locale and socioeconomic needs Toensmeier s ultimate goal is to place carbon farming firmly in the center of the climate solutions platform alongside clean solar and wind energy With The Carbon Farming Solution Toensmeier wants to change the discussion impact policy decisions and steer mitigation funds to the research projects and people around the world who envision a future where agriculture becomes the protagonist in this fraught urgent and unprecedented drama of our time Citizens farmers and funders will be inspired to use the tools presented in this important book to transform degraded lands around the world into productive carbon storing landscapes *Agriculture Defended* Philarator
