Rules for Reasoning Richard E. Nisbett,2013-02-01 This book examines two questions Do people make use of abstract rules such as logical and statistical rules when making inferences in everyday life Can such abstract rules be changed by training Contrary to the spirit of reductionist theories from behaviorism to connectionism there is ample evidence that people do make use of abstract rules of inference including rules of logic statistics causal deduction and cost benefit analysis Such rules moreover are easily alterable by instruction as it occurs in classrooms and in brief laboratory training sessions The fact that purely formal training can alter them and that those taught in one content domain can escape to a quite different domain for which they are also highly applicable shows that the rules are highly abstract The major implication for cognitive science is that people are capable of operating with abstract rules even for concrete mundane tasks therefore any realistic model of human inferential capacity must reflect this fact The major implication for education is that people can be far more broadly influenced by training than is generally supposed At high levels of formality and abstraction relatively brief training can alter the nature of problem solving for an infinite number of content domains
