

How to determine whether two circles intersect at two points.

A: $(x-3)^2 + (y-2)^2 = 25$

B: $(x-11)^2 + (y-2)^2 = r^2$

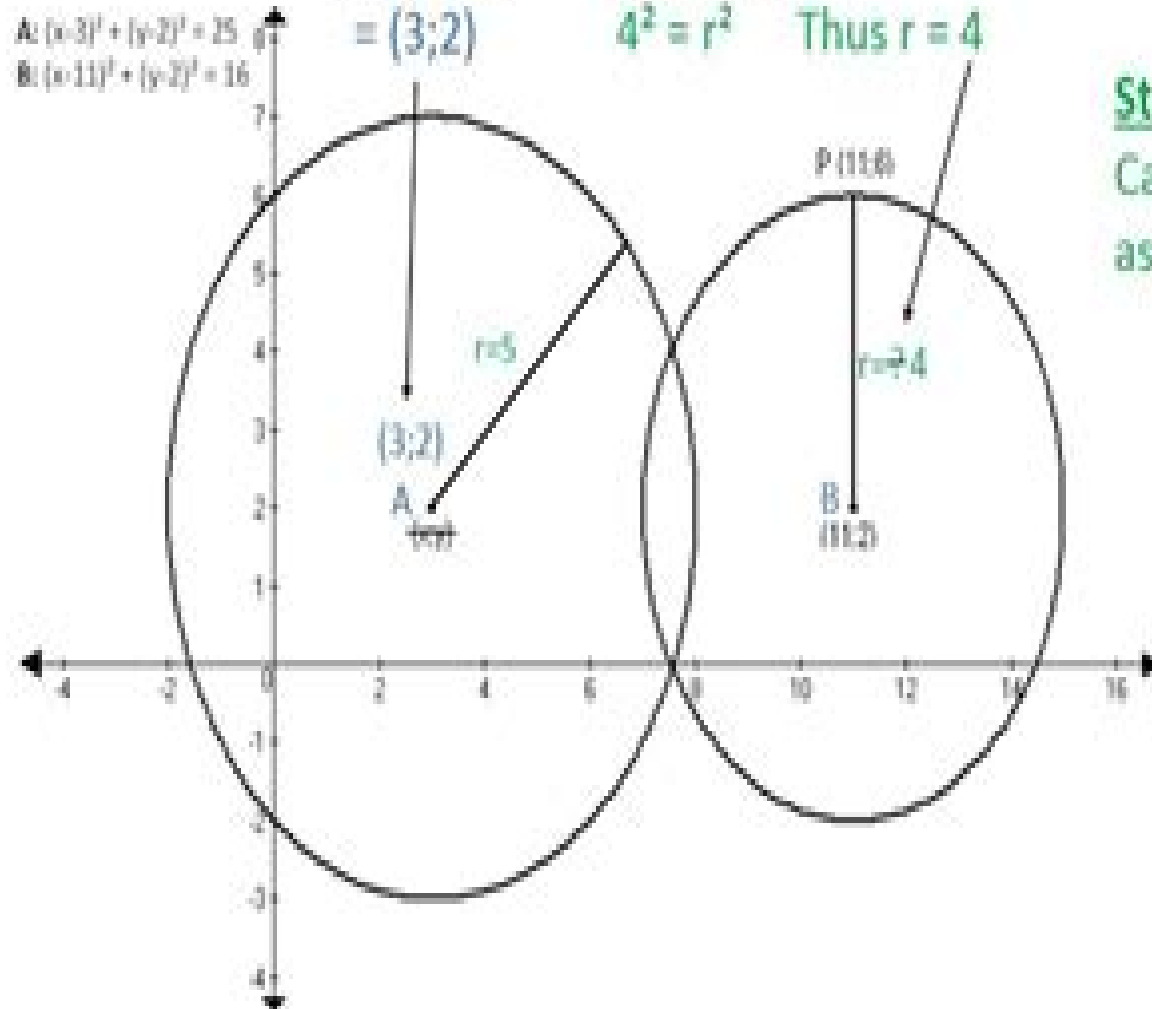

$((11) - 11)^2 + ((6) - 2)^2 = r^2$

$(0)^2 + (4)^2 = r^2$

$4^2 = r^2$ Thus $r = 4$

$-(-3) ; -(-2)$
 $= (3;2)$

A: $(x-3)^2 + (y-2)^2 = 25$
B: $(x-11)^2 + (y-2)^2 = 16$

Step 2:

Calculate the radii of both circles as well as the sum of the radii.

discusses in detail various problems in incidence geometry associated to Paul Erdős's famous distinct distances problem in the plane from the 1940s. The proof techniques are also connected to error correcting codes, Fourier analysis, number theory and differential geometry. Although the mathematics discussed in the book is deep and far reaching, it should be accessible to first and second year graduate students and advanced undergraduates. The book contains approximately 100 exercises that further the reader's understanding of the main themes of the book.

S.M.A.R.T. Circle Projects Andy Liu, 2017-09-07. This book describes projects in a Mathematical Circle, i.e. an organization that discovers and nurtures young mathematical talents through meaningful extra-curricular activities. This is the second volume in a trilogy describing in particular the S M A R T Circle project which was founded in Edmonton, Canada in 1981. The acronym S M A R T stands for Saturday Mathematical Activities, Recreations, Tutorials. This book, Volume II, is based on the papers published in scientific and education journals by the Circle members while they were still in junior high school, some still in elementary school. In essence, it explains the purpose of the Circle. Volume I describes how to run a Circle, and Volume III explains what actually takes place in the Circle. All three volumes provide a wealth of resources: mathematical problems, quizzes and games together with their solutions. The books will be of interest to self-motivated students who want to conduct independent research, teachers who work with these students, and teachers who are currently running or planning to run Mathematical Circles of their own.

Multiplanes and Multispheres John Browne, 2020-06-27. This book is a collection of notes exploring multiplanes and multispheres using Grassmann algebra with Mathematica. A multiplane is an m -dimensional generalization of the notions of point, line, plane, and hyperplane. A multisphere is an m -dimensional generalization of the notions of point, pair, circle, sphere, and hypersphere. Grassmann algebra is a generalization of the notions of scalars, vectors, and vector spaces. Mathematica is a system for doing mathematics on a computer. Grassmann algebra has now emerged as one of the more important tools for exploring multidimensional geometry and mathematical physics. It not only generalizes the classic vector algebra to enable construction of unlocated bivectors, trivectors, and multivectors; it is also an algebra par excellence for working with located entities such as points, lines, planes, and multiplanes. But multiplanes are not alone in their space. To every multiplane corresponds a docked multisphere, and vice versa. A docked multisphere passes through the origin. Corresponding points on a multiplane, multisphere pair are inverses. And because we can easily dock a multisphere by adding a displacement vector to its points, we can work with multispheres by operating on their corresponding multiplanes. For example, we can intersect two multispheres or a multisphere and a multiplane, construct the best fit multisphere to a system of points, compute the complex of circles for a Clifford circle theorem, or generate the in-multiphase of a simplex.
