 geological formations plays a crucial role in transitioning to a low carbon energy system The suitability and security of
 subsurface storage sites rely on the geological and hydraulic properties of the reservoir and confining units Additionally their
 ability to withstand varying thermal mechanical hydraulic biological and chemical conditions during storage operations is
 essential Each subsurface storage technology has distinct geological requirements and faces specific economic logistical
 public and scientific challenges As a result certain sites can be better suited than others for specific low carbon energy
 applications This Special Publication provides a summary of the state of the art in subsurface energy and carbon dioxide
