The topics range from meta-analysis, clinical trial design, causal inference, personalized medicine, to machine learning and next-generation sequence analysis. Since the publication of the first edition, there have been tremendous advances in biostatistics and bioinformatics. The new edition tries to cover as many important emerging areas and reflect as much progress as possible. Many distinguished scholars who greatly advanced their research areas in statistical methodology, as well as practical applications, also have revised several chapters with relevant updates and written new ones from scratch. The new edition has been divided into four sections: Statistical Methods in Medicine and Epidemiology, Statistical Methods in Clinical Trials, Statistical Genetics, and General Methods. To reflect the rise of modern statistical genetics as one of the most fertile research areas since the publication of the first edition, the brand new section on Statistical Genetics includes entirely new chapters reflecting the state of the art in the field. Although tightly related, all the book chapters are self-contained and can be read independently.
