and management of these fungal diseases on ornamental palms Accurate diagnosis and reliable management plan of palm fungal diseases usually requires expertise in both modern and advanced plant pathological approaches Historically it was general belief that plant pathogens are not associated with human diseases Since 19th century several clinical reports are available indicating many plant pathogenic fungi *Aspergillus* spp *Penicillium* spp *Alternaria* spp *Trichoderma* spp *Fusarium* spp *Curvularia* spp and *Colletotrichum* Spp as novel agents of human diseases Besides the association of fungal plant pathogens infecting ornamental palms harbouring any of earlier mentioned or other fungal species capable of causing certain diseases in human beings or pets by the ornamental palms cultivation either grown indoor or outdoor is an important area of research to be explored and addressed thoroughly This book will provide the deep information regarding major fungal diseases of ornamental palms their symptoms disease identification and etiology and management strategies This book will also provide unique knowledge regarding the ornamental palms harbouring kinds of human fungal pathogens and their practical management at domestic and commercial scale in order to make cultivation of these plant more beneficial for humans animals and environment

efficacious vaccines for foodborne pathogens Given the obvious benefits of laboratory models in foodborne disease research a great number of experiments have been conducted toward the elucidation of host pathogen interactions in and pathogenic mechanisms of foodborne infections Forming part of the Food Microbiology series Laboratory Models for Foodborne Infections presents a state of the art review of laboratory models that have proven valuable in deciphering the life cycle epidemiology immunobiology and other key aspects of foodborne pathogens Written by scientists with respective expertise in foodborne pathogen research each chapter includes a contemporary summary of a particular foodborne viral bacterial fungal or parasitic infection in relation to its life cycle epidemiology clinical features pathogenesis host pathogen interactions and other related aspects Besides providing a trustworthy source of information for undergraduates and postgraduates in food microbiology Laboratory Models for Foodborne Infections offers an invaluable guide for scientists and food microbiologists with interest in exploiting laboratory models for detailed study of foodborne infections
