Behavioral Law and Economics Eyal Zamir, Doron Teichman, 2018 In the past few decades economic analysis of law has been challenged by a growing body of experimental and empirical studies that attest to prevalent and systematic deviations from the assumptions of economic rationality While the findings on bounded rationality and heuristics and biases were initially perceived as antithetical to standard economic and legal economic analysis over time they have been largely integrated into mainstream economic analysis including economic analysis of law Moreover the impact of behavioral insights has long since transcended purely economic analysis of law in recent years the behavioral movement has become one of the most influential developments in legal scholarship in general Behavioral Law and Economics offers a state of the art overview of the field Eyal Zamir and Doron Teichman survey the entire body of psychological research that lies at the basis of behavioral analysis of law and critically evaluate the core methodological questions of this area of research Following this the book discusses the fundamental normative questions stemming from the psychological findings on bounded rationality and explores their implications for setting the law's goals and designing the means to attain them The book then provides a systematic and critical examination of the contributions of behavioral studies to all major fields of law including property contracts consumer protection torts corporate securities regulation antitrust administrative constitutional international criminal and evidence law as well as to the behavior of key players in the legal arena litigants and judicial decision makers

Animal Behavior John Alcock, Dustin R. Rubenstein, 2018 *Evolution in the Here and Now* Nigel Barber, 2020-05-12 This book argues that the two most influential theories on modern human behavior cultural determinism and evolutionary psychology are quite inadequate Cultural deterministic theories deny personal experience and too often fall prey to anthropocentric bias Most evolutionary psychologists argue that humans are shaped to fit our ancestral past effectively freezing us in time *Evolution in the Here and Now* looks to new factors like social learning and adaptation to explain the idiosyncrasies of human behavior in a more complete and nuanced way Evolutionary psychologist Nigel Barber shows that human behavior is uniquely crafted by the surrounding environment in underappreciated and surprising ways For example commerce and agriculture can be interpreted as adaptive alternatives to hunting and gathering Irrigated farming was a response to land scarcity which ultimately permitted the rise of early cities This cross disciplinary approach unites the missing ingredients that have for so long impeded our understanding of our own species and its variation across cultures

Evolution in the Here and Now is a bold step forward in the evolutionary understanding of human behavior that marries our biology with our history in ways that have never been attempted before **Scientific Epistemology** Hilary Kornblith, 2021 Epistemology has traditionally been motivated by a desire to respond to skeptical challenges The skeptic presents an argument for the view that knowledge is impossible and the theorist of knowledge is called upon to explain why we should think contrary to the skeptic that it is genuinely possible to gain knowledge Traditional theories of knowledge offer responses to the skeptic which fail to draw on the resources of the sciences This is no simple oversight there are principled reasons why such resources are thought to be unavailable to the theorist of knowledge This book takes a different approach After arguing that appeals to science are not illegitimate in responding to skepticism this book shows how the sciences offer an illuminating perspective on traditional questions about the nature and possibility of knowledge This book serves as an introduction to a scientifically informed approach to the theory of knowledge This book is a vital resource for students and scholars interested in epistemology and its connections to recent development in cognitive science Origins of Architectural Pleasure Grant Hildebrand, 1999-06-30 This engaging study discusses ways in which architectural forms emulate some archetypal settings that humans have found appealing and useful for survival from ancient times to the present 119 photos 6 line figures **The SAGE Handbook of Evolutionary Psychology** Todd K. Shackelford, 2021-08-04 Evolutionary psychology is an important and rapidly expanding area in the life social and behavioral sciences and this Handbook represents the most comprehensive and up to date reference text in the field today Over three volumes the Handbook provides a rich overview of the most important theoretical and empirical work in the field Chapters cover a broad range of topics including theoretical foundations the integration of evolutionary psychology with other life social and behavioral sciences as well as with the arts and the humanities and the increasing power of evolutionary psychology to inform applied fields including medicine psychiatry law and education Each of the volumes has been carefully curated to have a strong thematic focus covering The foundations of evolutionary psychology The integration of evolutionary psychology with other disciplines and The applications of evolutionary psychology The SAGE Handbook of Evolutionary Psychology is an essential resource for researchers graduate students and advanced undergraduate students in all areas of psychology and in related disciplines across the life social and behavioral sciences
