The Sustainable City Steven Cohen, Guo Dong, 2021-06-15 Living sustainably is not just about preserving the wilderness or keeping nature pristine The transition to a green economy depends on cities Economic technological and cultural forces are moving people out of rural areas and into urban areas If we are to avert climate catastrophe we will need our cities to coexist with nature without destroying it Urbanization holds the key to long term sustainability reducing per capita environmental impacts while

improving economic prosperity and social inclusion for current and future generations The Sustainable City provides a broad and engaging overview of the urban systems of the twenty first century It approaches urban sustainability from the perspectives of behavioral change organizational management and public policy looking at case studies of existing legislation programs and public private partnerships that strive to align modern urban life and sustainability The book synthesizes the disparate strands of sustainable city planning in an approachable and applicable guide that highlights how these issues touch our lives on a daily basis including the transportation we take the public health systems that protect us where our energy comes from and what becomes of our food waste This second edition of The Sustainable City dives deeper into the financing of sustainable infrastructure and initiatives and puts additional emphasis on the roles that individual citizens and varied stakeholders can play It also reviews current trends in urban inequality and discusses whether a model of sustainability that embraces a multidimensional approach to development and a multistakeholder approach to decision making can foster social inclusion It features many more examples and new international case studies spanning the globe *Chryssa & New York* Megan Holly Witko, Sophia Larigakis, Michelle White, 2023-03-21 The first major publication in more than thirty years on contemporary artist Chryssa an innovator of light art Chryssa New York offers a timely reassessment of Greek born artist Chryssa Chryssa Vardea Mavromichali 1933 2013 Chryssa was a leading figure in the postwar New York art world and in the use of signage text and neon yet her work which bridges Pop Conceptual and Minimalist approaches to art making remains under recognized Focusing on the artist s early career in particular her time in New York from the 1950s to the 1970s this book charts the emergence of her singular aesthetic especially her formal innovations with neon and culminates in the development of her monumental and rarely seen installation The Gates to Times Square 1964 66 Essays situate Chryssa s art alongside that of other New York based practitioners in the 1950s and 1960s consider her work through the lenses of queer theory and the Greek diaspora and uncover her crucial influence on light art today Rounding out the volume a conversation on the technical aspects of her practice and a comprehensive chronology make this the definitive publication on Chryssa for years to come Distributed for Dia Art Foundation and the Menil Collection Houston Exhibition Schedule Dia Chelsea New York March 2 July 23 2023 Menil Collection Houston September 29 2023 March 10 2024 Wrightwood 659 Chicago May 1 August 15 2024 Behavioral and Physiological Bases of Attentional Biases: Paradigms, Participants, and Stimuli Daniela M. Pfabigan, Ulrich S. Tran, 2015-08-21 Attentional biases ABs play a prominent role in the development and maintenance of clinically relevant symptoms of for example anxiety and depression In particular increased attentional orienting and preoccupation with biologically relevant and mood congruent stimuli has been observed suggesting that the visual attentional system is overly sensitive towards threat cues and avoidant of cues of reward in these disorders First several experimental paradigms have been used to assess ABs e g the dot probe task the emotional stroop task and the spatial cueing task amongst others Yet these paradigms are based on different theoretical backgrounds and target different stages of the

attentional process Thus different paradigms provided converging as well as diverging evidence with regard to ABs However it is often not entirely clear to what extent this reflects real differences and commonalities or is caused by differences in methodology For example behavioral reaction time data can only provide a snapshot of selective attention Measuring event related potentials eye movements or functional brain imaging data enables exploring the exact temporal and spatial dynamics of attentional processes Moreover neuroimaging data reveal specific cortical networks involved in directing attention toward a stimulus or disengaging from it Second ABs have been mainly discussed as symptoms of psychopathology while results in healthy participants are still scarce previous studies mostly compared extreme groups However a comprehensive theoretical and empirical account of ABs in psychopathology also requires a thorough account of ABs in the general healthy population Moreover the effect of gender as an important contributing factor in processing of emotional stimuli has also not been considered systematically in previous research Third a variety of stimuli has been used in the assessment of ABs So far mostly facial or word stimuli have been applied However in everyday life not only facial emotion recognition but also a fast evaluation of complex social situations is important to be effective in social interactions Recent research started using more complex stimuli to raise ecological validity However the use of ecologically valid stimuli poses some methodological challenges and needs to be applied more systematically The aim of this research topic is to integrate different paradigms and stimuli addressing individuals from the whole range of the population continuum and to apply different methodological approaches It is intended to bring together expertise in stimulus selection timing and implementing issues advancing and broadening the overall understanding of ABs
