This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering. These proceedings together with the seven previous proceedings dating from 1988 present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer reviewed papers from 26 countries. They are organised in 14 themes presenting the latest developments in physical modelling technology, modelling techniques and sensors through a wide range of soil structure interaction problems including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability. Fundamental aspects of earthquake engineering, geohazards, ground reinforcements and improvements and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state of the art technological developments and increased understanding of similitude principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering. **Math Chapterwise Solved Questions SSC CHSL HIGHER SECONDARY LEVEL** Mocktime Publication, Math Chapterwise Solved Questions SSC CHSL HIGHER SECONDARY LEVEL keywords ssc central police forces cpo capf ssc combined graduate level cgl combined higher secondary level exam chsl 10+2 level exam ssc ldc udc data entry operator exam ssc mts matriculation level exam ssc je civil mechanical electrical engineering exam ssc scientific assistant exam ssc english ajay kumar singh ssc english by neetu singh ssc english grammar ssc english arihant publication ssc previous year solved papers ssc general awareness ssc gk lucent ssc math rakesh yadav ssc previous year question bank ssc reasoning chapterwise solved papers ssc disha books ssc cgl questions ssc cpo questions ssc mts questions ssc chsl questions

Socializing Militants: How States End Asymmetric Conflict with Non-State Militants Jeremiah Rozman, 2023-05-09 The twentieth and twenty first centuries have seen states engaged in long term conflicts with asymmetrically weaker non state actors NSA States aim to end these conflicts as quickly as possible by combining force and diplomacy to socialize these militants meaning give them the characteristics of states in order to make a credible bargain achievable The militant s characteristics determine the state s optimal strategy In times of conflict politicians and pundits often march out an oft cited phrase in support of negotiations if you want to make peace you don t talk to your friends You talk to your enemies This is only possible when the opponent is willing to make peace under acceptable terms and able to enforce abidance Some opponents have an ideologically driven fundamental purpose that precludes renouncing violence under terms that a state could accept Others have reasonable demands and are structured in a way that allows productive negotiations In other cases the non state militant is not yet the type that can be bargained with but can be socialized into this type through a state s correct application of force and diplomacy I call this socialization logic I argue that optimally states tailor their strategy to socialize with their opponent to make it possible to successfully negotiate peace In practice the state s strategy is often distorted by its internal and external constraints Socialization logic provides a novel typology of non state militants based on how well interstate conflict bargaining concepts can be applied to them It looks beyond tactics to systematize a framework for understanding how leaders tailor strategy towards non state opponents based on their characteristics Socialization logic examines the NSA type as endogenous to the strategy that the state employs and provides a framework for leaders to design a strategy to end the conflict Finally socialization logic synthesizes critical NSA attributes ideology leadership structure and governance function and the state s strategy distorted by constraints into an interactive model Through 41 interviews primary and secondary source data I analyze the United States Russia s and Israel s asymmetric conflicts with militants and demonstrate that socialization logic most comprehensively explains their strategies throughout those conflicts

Genetics and Epigenetics of Fetal Alcohol Spectrum Disorders Feng C. Zhou, Stephen Mason, 2015-08-06 Women drinking during pregnancy can result in Fetal Alcohol Spectrum Disorder FASD which may feature variable neurodevelopmental deficits facial dysmorphology growth retardation and learning disabilities Research suggests the human brain is precisely formed through an intrinsic genetic cellular expression that is carefully orchestrated by an epigenetic program This program can be influenced by environmental inputs such as alcohol Current

research suggests the genetic and epigenetic elements of FASD are heavily intertwined and highly dependent on one another. As such, now is the time for investigators to combine genetic, genomic, and epigenetic components of alcohol research into a centralized, accessible platform for discussion. Genetic analyses inform gene sets which may be vulnerable to alcohol exposure during early neurulation. Prenatal alcohol exposure indeed alters expression of gene subsets including genes involved in neural specification, hematopoiesis, methylation, chromatin remodeling, histone variants, eye, and heart development. Recently, quantitative genomic mapping has revealed loci QTLs that mediate alcohol-induced phenotypes identified between two alcohol-drinking mouse strains. One question to consider is, besides the role of dose and stage of alcohol exposure, why only 5% of drinking women deliver newborns diagnosed with FAS (Fetal Alcohol Syndrome). Studies are ongoing to answer this question by characterizing genome-wide expression, allele-specific expression (ASE), gene polymorphisms (SNPs), and maternal genetic factors that influence alcohol vulnerability. Alcohol exposure during pregnancy, which can lead to FASD, has been used as a model to resolve the epigenetic pathway between environment and phenotype. Epigenetic mechanisms modify genetic outputs through alteration of 3D chromatin structure and accessibility of transcriptional machinery. Several laboratories have reported altered epigenetics, including DNA methylation and histone modification, in multiple models of FASD. During development, DNA methylation is dynamic yet orchestrated in a precise spatiotemporal manner during neurulation and coincident with neural differentiation. Alcohol can directly influence epigenetics through alterations of the methionine pathway and subsequent DNA or histone methylation/acetylation. Alcohol also alters noncoding RNA, including miRNA, and transposable elements (TEs). Evidence suggests that miRNA expression may mediate ethanol teratology, and TEs may be affected by alcohol through the alteration of DNA methylation at its regulatory region. In this manner, the epigenetic and genetic components of FASD are revealing themselves to be mechanistically intertwined. Can alcohol-induced epigenomic alterations be passed across generations? Early epidemiological studies have revealed infants with FASD-like features in the absence of maternal alcohol, where the fathers were alcoholics. Novel mechanisms for alcohol-induced phenotypes include altered sperm DNA methylation, hypomethylated paternal alleles, and heritable epimutations. These studies predict the heritability of alcohol-induced epigenetic abnormalities and gene functionality across generations. We opened a forum to researchers and investigators in the field of FASD to discuss their insights, hypotheses, fresh data, past research, and future research themes embedded in this rising field of the genetics and epigenetics of FASD. This eBook is a product of the collective sharing and debate among researchers who have contributed or reviewed each subject. [American Gridlock](#) James A. Thurber, Antoine Yoshinaka, 2015-11-12.
