

ORGAN SYSTEMS

The human body is either studied by regions or by organ systems. This book uses the organ system approach in which individual organs (such as bones) are grouped into the larger organ systems (for example, the skeletal system). Typically eleven organ systems are described. The **skeletal system** consists of all of the bones of the body. Examples are the femur and the humerus. The **nervous system** consists of the nerves, spinal cord, and brain while the **lymphatic system** consists of lymph glands, conducting tubes called **lymphatics**, and organs such as the spleen. The term *immune system* is more of a functional classification

and will not be treated as a separate system here. The **muscular system** consists of individual skeletal muscles as organs such as the **pectoralis major** and **deltoid**. Label the organ systems underneath each illustration and label the selected organs by using the terms available. When you finish, select different colors for each organ system and color them in.

Organ System	Organ	Organ	Organ
Skeletal system	Femur	Humerus	Brain
Nervous system	Nerves	Spinal cord	
Lymphatic system	Lymph nodes	Spleen	
Muscular system	Pectoralis major	Deltoid

with more ways to interact with and test students Physiology Coloring Workbook Kenneth Axen, Kathleen Vermitsky Axen, 1997 Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively through coloring thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy, and rehabilitation, medical technology, nutrition, physical education, allied health, and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction. Study Guide [to] Fundamentals of Anatomy & Physiology, 6th Ed. [by] Frederic H. Martini Charles M. Seiger, 2004 by Charles Seiger This very popular Study Guide is an excellent way to review basic facts and concepts as well as to develop problem-solving skills. A variety of questions including labeling and concept mapping are keyed to every learning objective in the textbook and are organized around the same 3-level learning system. **Anatomy & Physiology (includes A&P Online course) E-Book** Kevin T.
