Friedman,2013-03-09 The nutritional quality of a protein depends on the proportion of its amino acids especially the essential amino acids their physiological availability and the specific requirements of the consumer Availability varies and depends on protein source interaction with other dietary components and the consumer's age and physiological state In many foods especially those from plants low levels of various essential amino acids limits their nutritive value This is particularly important for cereals which may be inadequate in the essential amino acids isoleucine lysine threonine and tryptophan and legumes which are often poor sources of methionine Moreover these commodities are principle sources of protein for much of the earth's rapidly growing population At the current annual growth rate of about 2 percent the world population of about 4 billion will increase to 6.5 billion by the year 2000 and to 17 billion by the year 2050 Five hundred million people are presently estimated to suffer protein malnutrition with about fifteen thousand daily deaths The ratio of malnourished to adequately nourished will almost surely increase For these reasons and especially in view of the limited availability of high quality largely animal protein to feed present and future populations improvement of food and feed quality is especially important

We Are Eating the Earth Michael Grunwald, 2025-07 From the author of New York Times bestseller *The New New Deal* a groundbreaking piece of reportage from the trenches of the next climate war the fight to fix our food system Humanity has cleared a land mass the size of Asia plus Europe to grow food and our food system generates a third of our carbon emissions By 2050 we re going to need a lot more calories to fill nearly 10 billion bellies but we can t feed the world without frying it if we keep tearing down an acre of rainforest every six seconds We are eating the earth and the greatest challenge facing our species will be to slow our relentless expansion of farmland into nature Even if we quit fossil fuels we ll keep hurtling towards climate chaos if we don t solve our food and land problems In this rollicking shocking narrative Grunwald shows how the world after decades of ignoring the climate problem at the center of our plates has pivoted to making it worse embracing solutions that sound sustainable but could make it even harder to grow more food with less land But he also tells the stories of the dynamic scientists and entrepreneurs pursuing real solutions from a jungle tough miracle crop called pongamia to genetically edited cattle embryos from Impossible Whoppers to a non polluting pesticide that uses the technology behind the COVID vaccines to constipate beetles to death It s an often infuriating saga of lobbyists politicians and even the scientific establishment making terrible choices for humanity but it s also a hopeful account of the people figuring out what needs to be done and trying to do it Michael Grunwald bestselling author of *The Swamp* and *The New New Deal* builds his narrative around a brilliant relentless unforgettable food and land expert named Tim Searchinger He chronicles Searchinger s uphill battles against bad
