Christopherson, 2004 *Teaching Sustainability* Wendy Petersen Boring, William Forbes, William Forbes (Professor of

geography), 2013 American colleges and universities have been relatively quick to address the challenge of sustainability in operations. Ironically, they have been slower to respond in regard to their core mission: educating students. Teaching sustainability aims to redress this shortcoming by opening doors to education for sustainability in the humanities and social sciences. The essays in this collection are richly diverse. They investigate ways sustainability education pushes back against traditional disciplines while it simultaneously benefits from the perspectives and skills these fields have to offer. They also address big questions such as how to make education meaningful, how to examine hidden assumptions underlying current curricula, and how a focus on sustainability can answer critics of contemporary higher education. The heart of teaching sustainability is reflection and advice on pedagogy. From these richly diverse case studies, important common themes emerge: the symbiotic relationship between classroom and campus operations, techniques for transforming the campus itself from merely a setting to a learning laboratory, and the potential of community partners for teaching sense of place. An equally significant theme is the overlap between sustainability education and emerging best practice in pedagogy. Essays on theory and practice, individual and collaborative projects, service learning, and consequential activities all exemplify how sustainability and deep learning go hand in hand. Like sustainability itself, the volume infuses theory with practical application. The contributors demonstrate the ways in which a single course can serve as a powerful change agent for an entire campus, how to build bridges between faculty and administrators, and even how to move forward on modest budgets. The authors themselves constitute a network of advisors.

Advances in Geoethics and Groundwater Management : Theory and Practice for a Sustainable Development Manuel Abrunhosa, António Chambel, Silvia Peppoloni, Helder I. Chaminé, 2021-03-30. This book gathers the peer-reviewed proceedings of the 1st congress on Geoethics Groundwater Management GEOETH GWM 20 held in Porto, Portugal, in an online format on 18-22 May 2020. Hosted in School of Engineering ISEP Polytechnic of Porto based on Porto city, a UNESCO World Heritage Site, the international conference focused on what has now been dubbed hydrogeoethics, a novel transdisciplinary scientific field integrating all dimensions of geoethics in groundwater science and practice. Given its scope, the book is of interest to all researchers and practitioners in the geosciences, hydrology, water resources, hydrogeology, natural resources management, environment, engineering, law, sociology, education, philosophy, culture, among others. This joint congress is the result of a collaborative agreement between the IAH International Association of Hydrogeologists and IAPG International Association for Promoting Geoethics and reflects the need for concerted actions to achieve sustainable development. The diversity, scale, significance, and increasing magnitude of anthropogenic interactions with aquifers and groundwater, which often involve conflicting values or interests, call for analysis, discussions, and decisions on the part of the agents involved, e.g., groundwater scientists, policymakers, managers, organisations, professionals, and citizens. This approach calls for a responsible, sustainable, and human approach to groundwater use and management. The groundwater community involved in the exploration and exploitation, use, and management of this increasingly vital natural resource is becoming more and more aware that ethical issues pervade all our attitudes from concept to action and need to be addressed. Diverse values and cultures, science and education, law and policies, human and natural environments, and the public and the economic sectors view groundwater and its value and/or role differently. The authors believe that in a globalised and interconnected world, common ground must be found in the interest of peace, human development, and sustainability. The main topics covered here include:

1. Fundamentals of hydrogeoethics: cultures, principles, and geoethical values on groundwater science and engineering.
2. Lessons for a resilient and sustainable future with hydrogeoethics: case studies of geoethics in groundwater science, engineering, profession, and management.
3. Scientific and humanistic components.

of hydrogeoethics in groundwater education and professional training 4 Socio hydrogeology and ethical groundwater management 5 Geoethics of decision making under uncertainty and ethical issues in neglecting groundwater functioning 6 Groundwater geological legal social and ethical challenges of a unique natural resource
