3)  $G > T$  : Budget deficit       $G < T$  : Budget surplus       $G = T$  : Budget balance

4) Consider the following table showing national income and government net tax revenues in billion of dollars. Assume that the level of government purchases is 155 \$ billion

a) Compute the government's balance for each level of national income and fill in the table below

| Actual National Income (Y)<br>(Billions of \$) | Net Tax Revenues (T)<br>(Billions of \$) | Budget Balance (T-G)<br>(Billions of \$) |
|------------------------------------------------|------------------------------------------|------------------------------------------|
| 100                                            | 40                                       | -115                                     |
| 200                                            | 55                                       | -100                                     |
| 300                                            | 70                                       | -85                                      |
| 400                                            | 85                                       | -70                                      |
| 500                                            | 100                                      | -55                                      |
| 600                                            | 115                                      | -40                                      |
| 700                                            | 130                                      | -25                                      |
| 800                                            | 145                                      | -10                                      |

so Budget Balance  $\rightarrow T - G$       Where  $T$  : Tax Revenue       $G$  : Government Purchase

①  $40 - 155 = -115$       ②  $55 - 155 = -100$

b) Suppose that net taxes are given by  $T$ , where  $T = t_0 + t_1 Y$ . Using data in the table, determine the values of  $t_0$  and  $t_1$ .

so,  $40 = t_0 + t_1 \cdot (100)$       and       $55 = t_0 + t_1 \cdot (200)$

$$t_1 = \frac{(55 - 40)}{(200 - 100)} = 0.15$$

$t_1 = 0.15$

$40 = t_0 + 0.15(100)$

$t_0 = 25$
