Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Just Financial Markets? Lisa Herzog, 2017 Well functioning financial markets are crucial for the economic well being and the justice of contemporary societies The Great Financial Crisis has shown that a perspective that naively trusts in the self regulating powers of free markets cannot capture what is at stake in understanding and regulating financial markets The damage done by the Great Financial Crisis including its distributive consequences raises serious questions about the justice of financial markets as we know them This volume brings together leading scholars from political theory law and economics in order to explore the

relation between justice and financial markets Broadening the perspective from a purely economic one to a liberal egalitarian one the volume explores foundational normative questions about how to conceptualize justice in relation to financial markets the biases in the legal frameworks of financial markets that produce unjust outcomes and perspectives of justice on specific institutions and practices in contemporary financial markets Written in a clear and accessible language the volume presents analyses of how financial markets should function and how the Great Financial Crisis came about proposals for how the structures of financial markets could be reformed and analysis of why reform is not happening at the speed that would be desirable from a perspective of justice **Official Florida Statutes** Florida,2013 **Boots on the Ground** Johanu

Paul,Paolo Mulatti,Thawat Tiensin,2019-08-29 Avian influenza is a highly contagious viral disease characterized by intense circulation in the wild waterbird reservoirs with periodical introductions into the domestic poultry sector AI viruses have been the

source of devastating economic losses in the poultry industry over the last three decades and have become a major veterinary and public health concern due to their zoonotic potential. The most emblematic illustration of this impact has been the emergence of the HPAI H5N1 virus in southern China in the mid 1990s followed by its continental spread across East and Southeast Asia and the unprecedented epidemics recorded in 2003-2004. More recently from 2014 to 2017 several subtypes of HPAI including H5N1, H5N6, H5N8 emerged in East Asia and spread intercontinentally stressing the crucial role of this geographical hotspot as a source of new HPAI subtypes. The international dimension and the difficulty to effectively control those epidemics highlight the need for a global approach to HPAI surveillance and a comprehensive knowledge on epidemiology and patterns of the disease. This Research Topic aims at contributing to fill this gap. It includes ten papers which supplement the knowledge of the epidemiology of AI and offer new approaches on control strategies in various regions of the world.
