

Adult Basic and Advanced Life Support

Cardiac Arrest

Burden of disease
Affects individuals across age, gender, race, geography, and socioeconomic status

Out-of-hospital
An estimated 400,000 per year in the United States and Canada combined, with a survival rate of 10%

In-hospital
Without a national registry in Canada, the combined numbers are unknown. However, over 290,000 per year in the United States, with a survival rate of 25%

CPR and Access

2020 Guidelines reaffirm the need for early initiation of High-quality CPR

Real-time audiovisual feedback is suggested as a means to maintain CPR quality.

Depth of at least 5 cm (2 inches) for chest compressions

100 to 120/min

Administer Epinephrine
Administer as soon as feasible for nonshockable rhythms and after defibrillation has failed in shockable rhythms.

Attempt IV Before IO
Emphasis is on intravenous as first access attempt; if that fails or is not feasible, intraosseous may be used.

Defibrillation

Critical
for cardiac arrest due to ventricular fibrillation and pulseless ventricular tachycardia

Double sequential defibrillation is shock delivery by 2 defibrillators nearly simultaneously.

The usefulness of double sequential defibrillation has not been established for refractory shockable rhythms. Routine use of double sequential defibrillation is not recommended at this time.

Special Considerations

Cardiac arrest due to an opioid overdose must be considered and requires individualized treatment.

Administer **naloxone** for respiratory arrest or if unsure if patient is in cardiac arrest. The most common routes of administration are intravenous, intramuscular, or intranasal. New in 2020: **Algorithms** for healthcare providers and lay rescuers for treating overdoses are provided.

Cardiac arrest in pregnancy requires individualized management of resuscitation.

EMS should notify healthcare facilities in advance to ensure all resources are available for both infant and mother.

Focus on **maternal resuscitation**, with preparation for **perimortem caesarean delivery** if necessary.

Perform **left uterine displacement** during CPR to improve perfusion.

New in 2020

Point-of-care ultrasound: If an **experienced sonographer** is **present** and the **use of ultrasound does not interfere** with standard cardiac arrest protocol, then it may be considered as an adjunct, although its usefulness has not been well established.

Neuroprognostication: **Multiple modalities** should be used to improve decision-making accuracy.

Post-cardiac arrest care: Emphasis is on **interventions during the initial stabilization phase** as well as on **continued management** and additional emergent activities.

Chain of Survival: A **new link—recovery**—has been added. Full recovery can take a year or more. Because recovery continues long **beyond initial hospitalization**, provide assessment and support for physical, cognitive, and psychosocial needs.

American Heart Association Acls Guidelines 22

**Michael F. Lubin, Robert B.
Smith, Thomas F. Dodson, Nathan O.
Spell, H. Kenneth Walker**

American Heart Association Acls Guidelines 22:

Moderate and Deep Sedation in Clinical Practice Richard D. Urman, Alan David Kaye, 2017-10-12 Millions of procedures requiring sedation are performed each year covering a large array of medical specialties in both inpatient and outpatient settings This tremendous growth has led to sedation being administered by a wide range of healthcare providers including non anesthesiologist physicians nurses and nurse practitioners Moderate and Deep Sedation in Clinical Practice is a concise practical handbook for all medical and surgical professionals who sedate patients This up to date evidence based how to manual instructs these professionals on how to evaluate patients updates relevant pharmacology and guides them on legal and quality assurance issues It contains advice on sedation for specific populations such as elderly pediatric ICU emergency room endoscopy and reproductive technologies Written and edited by experts in procedural sedation and sedation education this book will help users develop safer techniques policies and procedures It is essential reading for any healthcare provider administering moderate or deep sedation
