Energy Flow

Sankey Diagrams and Energy Flow

Sankey diagrams are visual representations that depict the flow of energy in a system. They are based on the principle of conservation of energy, which states that energy cannot be created or destroyed, only transformed or transferred. Sankey diagrams are particularly useful for energy flow analysis, efficiency analysis, and identifying energy losses in a system.

Sankey diagrams are used to show the flow of energy from a source to a sink, and they can be used to identify energy losses and inefficiencies in a system. They are a powerful tool for energy analysis and can be used in a variety of applications, including energy audits, energy modeling, and energy management.

Hybrid Solutions for the Modelling of Complex Environmental Systems

Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology *The Shock and Vibration Digest* ,1986-07
