Distance Learning, E-Learning and Blended Learning in Mathematics Education Jason Silverman, Veronica Hoyos, 2018-07-20. This book builds on current and emerging research in distance learning, e learning and blended learning. Specifically, it tests the boundaries of what is known by examining and discussing recent research and development in teaching and learning based on these modalities with a focus on lifelong mathematics learning and teaching. The book is organized in four sections. The first section focuses on the incorporation of new technologies into mathematics classrooms through the construction or use of digital teaching and learning platforms. The second section presents a wide range of perspectives on the study and implementation of different tutoring systems and or computer assisted math instruction. The third section presents four new innovations in mathematics learning and or mathematics teacher education that involve the development of novel interfaces for communicating mathematical ideas and analyzing student thinking and student work. Finally, the fourth section presents the latest work on the construction and implementation of new MOOCs and rich media platforms developed to carry out specialized mathematics teacher education.

Narrative and Cognition in Literature and Science Michael Sinding, Aura Heydenreich, Klaus Mecke, 2025-07-21. This volume explores cognitive perspectives on how science and narrative shape one another. Narrative is a principle of cognition and cognition is fundamental to narrative. This duality enables a deeper mapping of the feedback between story and the natural sciences. Science as a culturally organized and systematic mode of knowing the world may seem opposed to narrative thinking. Yet they are deeply interwoven. Scientists tell many kinds of stories across genres and media. In thought experiments, lab experiments, written arguments and histories and philosophies of fields, they recount and interpret unfoldings of events at often uncanny scales, from particle collisions to the evolution of life to cosmic expansion. Science stories go

beyond science Early science is entwined with myth religion and magic We still mythologize beneficent or evil geniuses the promises and perils of technology Teachers journalists politicians and lawyers all tell science stories for their own purposes Literary artists use scientific ideas and forms reimagining physical forces causality and time in storyworlds themes and figures This is the first cognition focused multi disciplinary analysis of these narrative science relations **Network World**, 1999-11-22 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce **Working Mother**, 2002-10 The magazine that helps career moms balance their personal and professional lives Paperbound Books in Print 1995 Reed Reference Publishing, 1995-12 **Working Mother**, 2003-06 The magazine that helps career moms balance their personal and professional lives Mathematics and Science Across the Curriculum, 2002 **Children's Literature in the Reading Program** Deborah A.
