Statistical Benchmarks for Quantum Transport in Complex Systems Mattia Walschaers, 2018-07-31 This book introduces a variety of statistical tools for characterising and designing the dynamical features of complex quantum systems These tools are applied in the contexts of energy transfer in photosynthesis and boson sampling In dynamical quantum systems complexity typically manifests itself via the interference of a rapidly growing number of paths that connect the initial and final states The book presents the language of graphs and networks providing a useful framework to discuss such scenarios and explore the rich phenomenology of transport phenomena As the complexity increases deterministic approaches rapidly become intractable which leaves statistics as a viable alternative

Energy Transfers in Atmosphere and Ocean Carsten Eden,Armin Iske,2019-01-23 This book describes a recent effort combining interdisciplinary expertise within the Collaborative Research Centre Energy transfers in atmosphere and ocean TRR 181 which was funded by the German Research Foundation DFG Energy transfers between the three dynamical regimes small scale turbulence internal gravity waves and geostrophically balanced motion are fundamental to the energy cycle of both the atmosphere and the ocean Nonetheless they remain poorly understood and quantified and have yet to be adequately represented in today s climate models Since interactions between the dynamical regimes ultimately link the smallest scales to the largest ones through a range of complex processes understanding these interactions is essential to constructing atmosphere and ocean models and to predicting the future climate To this end TRR 181 combines expertise in applied mathematics meteorology and physical oceanography This book provides an overview of representative specific

topics addressed by TRR 181 ranging from a review of a coherent hierarchy of models using consistent scaling and approximations and revealing the underlying Hamiltonian structure a systematic derivation and implementation of stochastic and backscatter parameterisations an exploration of the dissipation of large scale mean or eddying balanced flow and ocean eddy parameterisations and a study on gravity wave breaking and mixing the interaction of waves with the mean flow and stratification wave wave interactions and gravity wave parameterisations to topics of a more numerical nature such as the spurious mixing and dissipation of advection schemes and direct numerical simulations of surface waves at the air sea interface In TRR 181 the process oriented topics presented here are complemented by an operationally oriented synthesis focusing on two climate models currently being developed in Germany In this way the goal of TRR 181 is to help reduce the biases in and increase the accuracy of atmosphere and ocean models and ultimately to improve climate models and climate predictions
