Mesoscale Chemistry National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2015-08-06 In the last few decades great strides have been made in chemistry at the nanoscale where the atomic granularity of matter and the exact positions of individual atoms are key determinants of structure and dynamics Less attention however has been paid to the mesoscale it is at this scale in the range extending from large molecules 10 nm through viruses to eukaryotic cells 10 microns where interesting ensemble effects and the functionality that is critical to macroscopic phenomenon begins to manifest itself and cannot be described by laws on the scale of atoms and molecules alone To further explore how knowledge about mesoscale phenomena can impact chemical research and development activities and vice versa the Chemical Sciences Roundtable of the National Research Council convened a workshop on mesoscale chemistry in November 2014 With a focus on the research on chemical phenomena at the mesoscale participants examined the opportunities that utilizing those behaviors can have for developing new catalysts adding new functionality to materials and increasing our understanding of biological and interfacial systems The workshop also highlighted some of the challenges for analysis and description of mesoscale structures This report summarizes the presentations and discussion of the workshop

The Phytochemical Landscape Mark D. Hunter, 2016-08-09 The dazzling variation in plant chemistry is a primary mediator of trophic interactions including herbivory predation parasitism and disease At the same time such interactions feed back to influence spatial and temporal variation in the chemistry of plants In this book Mark Hunter provides a novel approach to linking the trophic interactions of organisms with the cycling of nutrients in ecosystems Hunter introduces the concept of the phytochemical landscape the shifting spatial and temporal mosaic of plant chemistry that serves as the nexus between trophic interactions and nutrient dynamics He shows how plant chemistry is both a cause and consequence of trophic interactions and how it also mediates ecosystem processes such as nutrient cycling Nutrients and organic molecules in plant tissues affect decomposition rates and the fluxes of elements such as carbon nitrogen and phosphorus The availability of these same nutrients influences the chemistry of cells and tissues that plants produce In combination these feedback routes generate pathways by which trophic interactions influence nutrient dynamics and vice versa mediated through plant chemistry Hunter provides evidence from terrestrial and aquatic systems for each of these pathways and describes how a focus on the phytochemical landscape enables us to better understand and manage the ecosystems in which we live Essential reading for students and researchers alike this book offers an integrated approach to population community and ecosystem level ecological processes
