

Case Study 2: An Epidemic of Thyrotoxicosis

Adapted from CDC, Epidemiology Program Office, Case Studies in Applied Epidemiology

Part 1

On the afternoon of June 16, 1985, an endocrinologist at the University of South Dakota, Sioux Falls, was examining a patient with recent-onset thyrotoxicosis (manifestations of excess thyroid hormone) when the patient mentioned that there were four other people in his small town with the same problem. The patient was the postmaster of Valley Springs, South Dakota (population 801). Just a few days earlier, the endocrinologist had read an abstract of a CDC investigation describing an epidemic of painless thyroiditis in York County, Nebraska, in early 1984. Although the cause was never determined, the most likely etiology was believed to be viral infection. By speaking with other local physicians, the endocrinologist identified seven other patients with possible thyrotoxicosis. Six of the patients lived in Valley Springs, and two lived in southwest Minnesota. All exhibited classic symptoms of thyrotoxicosis (anxiety, shortness of breath, palpitations, rapid heartbeat, weight loss), and all had markedly elevated thyroxine (T₄) levels. All but one had abnormally low radiiodine thyroid uptakes. The endocrinologist called CDC and provided the EIS Officer with the information summarized in the line listing below.

Table 1. Line listing of patients with clinical thyrotoxicosis reported to CDC on initial telephone call, June 18, 1985

<u>Patient</u>	<u>Age</u>	<u>Sex</u>	<u>Residence</u>	<u>Onset date</u>	<u>Max. T₄*</u>	<u>24-hr. RAIU (%)†</u>

Questions

Intergovernmental Relations and Human Resources Subcommittee, 1977 **10th Annual National Conference on Radiation Control**, 1979 **The Breast Cancer Pattern** Dave Frahm, 2012 Did you know these facts about breast cancer? Every 3 minutes someone is diagnosed. Every 12 minutes someone dies from it. One in eight women are now developing it in their lifetime. It can take as many as 20 years for a tumor to grow large enough to be detected via conventional means, i.e. mammography. Mammography renders inaccurate info 60% of the time, 30% false negatives, 30% false positives. Naturopathic doctor and best-selling author of *A Cancer Battle Plan*, Dr. Dave Frahm offers an effective and time-tested battle plan to help turn around the disease process and to prevent it from occurring in the first place. The alarming truth is that most women have no idea they should be asking these three questions: Is there anything I can do to avoid getting breast cancer? How does my starving thyroid kick start the disease process? How can I get my body back in balance if I have been diagnosed with cancer? In *The Breast Cancer Pattern*, Dr. Frahm shares the pattern he identified in clients seeking nutritional counseling after being diagnosed with breast cancer. In this groundbreaking work, you will learn vital answers about how to identify and address compromises in the body. What a weak thyroid has to do with cancer. How to know if your thyroid is weak. The danger of out-of-balance hormones, estrogen dominance, iodine deficiency, and a woman's body. The dangers of mammography. Diet and lifestyle changes that rebuild the immune system.
