Biome Assessment Study Guide

Biomes: A place characterized by the organisms that live there and determined by the abiotic factors of rainfall and temperature.

A biome can be aquatic (water) or terrestrial (land) and contain one or more ecosystems.

Land Biomes

Temperate deciduous forest- soil is fairly rich and plants cover the forest floor

- most trees are deciduous, losing their leaves in the fall to help conserve water so they can survive winter.

Coniferous/Taiga forest- conifer trees that produce their seeds in cones and do not lose their leaves in fall

- trees conserve water in the winter with the help of needlelike leaves and a waxy coating on their leaves

Tropical rainforests - receive the highest yearly average rainfall

- most biologically diverse (the most different types of plants and animals)
- soil is wet and has poor nutrients

Savanna- large herbivores live and graze on the grass here, scattered clumps of trees

Temperate grasslands have small, wind-swept, scattered trees

Desert - plants grow for water in shallow, irregularly shaped holes

Tundra - no trees, dominated by low-growing plants and mosses

Answers For Biomes Study Guide
