

Seat adjustment

53

For your personal safety when adjusting the seat position, please follow the instructions below carefully.

 Never try to adjust your seat while driving the vehicle. The seat could respond with an unexpected movement, and the ensuing loss of vehicle control could lead to an accident.

Be sure that the safety belt remains firmly against your body at all times. In the event of a frontal impact, a loose lap belt could slide over the hips, leading to abdominal injury. In addition, the safety belt's restraint effectiveness is reduced if the belt is worn loosely.

Never ride with the backrest reclined to an extreme angle (this particularly applies to the front passenger). If you do so, there is a risk that you will slide under the safety belt in an accident, thus reducing the protection provided by the safety belt. 

Correct sitting posture

To reduce strain on the spinal column, sit all the way back in the seat and rest your back fully against the backrest. In the ideal sitting posture, your head is positioned along a straight line in relationship to your spinal column.

For long-distance driving, you may wish to increase the backrest tilt angle slightly to reduce muscular tension. You should be able to grasp the steering wheel at its highest point with your arms slightly bent.

- 1 Backward/Forward adjustment
- 2 Cushion height
- 3 Backrest angle

 Comply with the adjustment instructions on this page; otherwise, personal safety is diminished.
