Collision and Grounding of Ships and Offshore Structures Jorgen Amdahl, Sören Ehlers, Bernt Johan Leira, 2013-05-14
Collision and Grounding of Ships and Offshore Structures contains the latest research results and innovations presented at the 6th International Conference on Collision and Grounding of Ships and Offshore Structures Trondheim Norway 17-19 June 2013. The book comprises contributions made in the field of numerical and analytical analysis of *Extending TL-2 Short Radius Guardrail to Larger Radii* Cody S. Stolle, Bob W. Bielenberg, Dean Sicking, John Douglas Reid, Ronald K. Faller, Karla A. Lechtenberg, 2014. Integrated Management of Carbon Sequestration and Biomass Utilization Opportunities in a Changing Climate, 2010. Forests are important for carbon sequestration and how they are manipulated either through natural or human induced disturbances can have an effect on CO₂ emissions and carbon sequestration. The 2009 National Silviculture Workshop presented scientific information and management strategies to meet a variety of objectives while simultaneously addressing carbon sequestration and biomass utilization. The focus areas were the role of climate change in science and management, silvicultural methods to address carbon sequestration and biomass utilization, alternative silvicultural strategies to address the growth and development of forests and current applications of computer simulation models or modeling techniques designed to provide decision support. **Hydraulics in Civil and Environmental Engineering, Fifth Edition** Andrew Chadwick, John Morfett, Martin Borthwick, 2013-03-18. Now in its fifth edition, *Hydraulics in Civil and Environmental Engineering* combines thorough coverage of the basic principles of civil engineering hydraulics with wide-ranging treatment of practical real-world applications. This classic text is carefully structured into two parts to address principles before moving on to more advanced topics. The first part focuses on fundamentals including hydrostatics, hydrodynamics, pipe and open channel flow, wave theory, physical modeling, hydrology and sediment transport. The second part illustrates the engineering applications of these fundamental principles to pipeline system design, hydraulic structures and river, canal and coastal engineering, including up-to-date environmental implications. A chapter on computational hydraulics demonstrates the application of computational simulation techniques to modern design in a variety of contexts. What's New in This Edition: Substantive revisions of the chapters on hydraulic machines, flood hydrology and computational modeling. New material added to the chapters on hydrostatics, principles of fluid flow, behavior of real fluids, open channel flow, pressure surge in pipelines, wave theory, sediment transport, river engineering and coastal engineering. The latest recommendations on climate change, predictions, impacts and adaptation measures. Updated references. *Hydraulics in Civil and Environmental Engineering, Fifth Edition* is an essential resource for students and practitioners of civil, environmental and public health engineering and associated disciplines. It is comprehensive, fully illustrated and contains many worked examples. Spreadsheets and useful links to other web pages are available on an accompanying website and a solutions manual is available to lecturers.
