Writing Instruction and Intervention for Struggling Writers Michael Dunn, 2019-11-18 Writing is a challenging task for many children To address this issue many educational researchers advocate for schools to implement a multi tiered systems of support MTSS model where struggling

writers can be detected as early as kindergarten and provided with intervention programming to improve their skills and hopefully not need long term placement in special education. Traditionally schools have employed the wait to fail model where children were offered the opportunity to learn to read, write, and do math in the first few years of elementary school. If they still struggled at the end of third grade, age eight, then they would be assessed for special education. The problem with this was not only a delayed assessment timeline but also the standardized tests not having an adequate set of questions to assess early elementary grade skills as well as the ethical problems and racial/ethnic biases of test questions. MTSS provides educators with a renewed emphasis on early intervention and progress monitoring assessment once or twice a week to monitor each student's skills and make instructional changes to promote success. This book offers a description and case examples of how schools and teachers can apply MTSS concepts for writing.
