McCallum, Eric Connally, Deborah Hughes-Hallett, 2014-11-25 Algebra Form and Function was designed based on the fundamental goal for a student to foster understanding of algebraic structure that is an understanding of how the arrangements of symbols allows us to predict for example the behavior of a function or the number of solutions to an equation Mastering algebraic structure enables students to read algebraic expressions and equations in real life contexts not just manipulate them and to choose which form or which operation will best suit the context It facilitates being able to translate back and forth between symbolic graphical numerical and verbal representations By balancing practice in manipulation and opportunities to see the big picture Algebra Form and Function offers a way for teachers to help students achieve real mastery of algebra *Algebra* L.E. Sigler, 2012-12-06 There is no one best way for an undergraduate student to learn elementary algebra Some kinds of presentations will please some learners and will disenchant others This text presents elementary algebra organized according to some principles of universal algebra Many students find such a presentation of algebra appealing and easier to comprehend The approach emphasizes the similarities and common concepts of the many algebraic structures Such an approach to learning algebra must necessarily have its formal aspects but we have tried in this presentation not to make abstraction a goal in itself We have made great efforts to render the algebraic concepts intuitive and understandable We have not hesitated to deviate from the form of the text when we feel it advisable for the learner Often

the presentations are concrete and may be regarded by some as out of fashion How to present a particular topic is a subjective one dictated by the author's estimation of what the student can best handle at this level We do strive for consistent unifying terminology and notation This means abandoning terms peculiar to one branch of algebra when there is available a more general term applicable to all of algebra We hope that this text is readable by the student as well as the instructor It is a goal of ours to free the instructor for more creative endeavors than reading the text to the students

Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children's love of games songs and movement he's proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It's no longer just their teacher's math It's their math America's children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That's acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don't You know that to be true if you've ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like $5 \times 7 = 12$, $17 \times 8 = 96$, $X \times 7 = 42$ and $56 \times 7 = 8$ and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget *Teaching Mathematics in the Block* Carla Hunt, 2013-10-30 Provides detailed instructional strategies sample lesson plans and sample assessments so that mathematics teachers can make the best use of the additional time
