

# Simplifying Expressions

**Simplifying expressions** involves using the properties of operations to create equivalent algebraic expressions.

 **Example** Simplify  $4(x + 7)$

This means '4 times the sum of  $x$  and 7.'

| Repeated addition                                                                                                                                    | Box method                                                                                                                                                                                                          | Distributive property                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $4(x + 7)$<br>$= (x + 7) + (x + 7) + (x + 7) + (x + 7)$<br>$= x + 7 + x + 7 + x + 7 + x + 7$<br>Combine the four $x$ s and the four 7s:<br>$4x + 28$ | <div style="text-align: center;"><math>x</math>      <math>+7</math><br/></div> Multiply 4 times $x$ and 4 times 7:<br>$4x + 28$ | <div style="text-align: center;"><br/><math>4(x + 7)</math></div> Distribute the 4 to the $x$ and the 7:<br>$4x + 28$ |

So  $4(x + 7) = 4x + 28$
