Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers Nicholas H. Wasserman, 2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics Algebraic Structures and Applications Sergei Silvestrov, Anatoliy Malyarenko, Milica Rančić, 2020-06-18 This book explores the latest advances in algebraic structures and

Connection Matrices in Combinatorial Topological Dynamics Marian Mrozek, Thomas Wanner, 2025-07-08 This book provides an introduction to the theory of connection matrices in the context of combinatorial multivector fields The theory of connection matrices was proposed by Conley and Franzosa for classical continuous time dynamical systems as a tool for studying connecting orbits between isolated invariant sets It generalizes the Morse complex in Morse theory and has found numerous applications in dynamics Connection matrices have been and still are a challenging topic to study as there are no complete introductory texts and both their intricate definition and properties are scattered over numerous research papers In recent years dynamical concepts have found their way into a combinatorial context Starting with combinatorial vector fields introduced by Forman to generalize classical Morse theory it has been realized that this transfer of ideas can lead to important applications Similarly Conley's theory of isolated invariant sets has been transferred to the combinatorial setting This when combined with the concept of multivector fields opens the door to a complete combinatorial dynamical theory In this book we take Conley's theory one step further by presenting a complete discussion of connection matrices for combinatorial multivector fields While some of the results in this book are based on known approaches we show in a detailed way how they can be carried over to the case of multivector fields on general Lefschetz complexes Along the way we introduce notions which are new even in the classical setting such as a formal approach to addressing the nonuniqueness of connection matrices as well as mechanisms for comparing connection matrices even under poset changes Finally we show that specifically for the case of Forman's gradient combinatorial vector fields connection matrices are necessarily unique and can be determined explicitly in a straightforward way Focusing on the combinatorial theory of connection matrices has a number of advantages On the one hand many of the technical difficulties of the classical continuous time dynamics situation are not present in the discrete combinatorial context This allows us to

provide a complete and informal introduction to the theory in the second section of the book This in turn will enable the readers to construct and analyze their own examples easily On the other hand the complete theory including the existence of connecting orbits in the combinatorial setting can be presented in detail based on an explicit distinction between the algebraic and topological parts of the theory In this way it is our hope that this book will be an impetus for further knowledge transfer between dynamics and combinatorics and even topological data analysis This text is aimed at researchers in the fields of dynamics and topological data analysis and it is suitable for advanced graduate students interested in applying connection matrix methods to their own studies

Planting the Seeds of Algebra, PreK-2 Monica Neagoy, 2012-04-20 The subject of algebra has always been important in American secondary mathematics education However algebra at the elementary level has been garnering increasing attention and importance over the past 15 years There is consequently a dire need for ideas suggestions and models for how best to achieve pre

algebraic instruction in the elementary grades Planting the Seeds of Algebra will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades The book will walk teachers of young children through many examples of K 6 math lessons and unpack step by step the hidden connections to higher algebra After reading this book teachers will be better equipped
