Brown, Mark. "Military chemical warfare agent human subjects testing: part 1—history of six-decades of military experiments with chemical warfare agents." *Military medicine* 174, no. 10 (2009): 1041-1048.

Brown's work provides a thorough account of military chemical warfare testing conducted on human subjects. The author explores the details of experiments that occurred on human subjects between World War I and 1975. However, clinical and research evaluation of the long-term health consequences on the agents is difficult to analyse since the experiments were conducted a long time ago, with identities of the military personnel exposed and level of exposure poorly recorded. Some of the drugs tested on human subjects involved hallucinogens such as phencyclidine or PCP. Some reported mood changes and feelings of unreality. Other subjects became withdrawn, while others became more interactive. At higher levels, the subjects reported visual disturbances, memory loss, limb paresthesias, ataxia, and blurred vision.
