Marks, 2001 Are humans unique? This simple question at the very heart of the hybrid field of biological anthropology poses one of the false dichotomies with a stereotypical humanist answering in the affirmative and a stereotypical scientist answering in the negative. The study of human biology is different from the study of the biology of other species. In the simplest terms, people's lives and welfare may depend upon it in a sense that they may not depend on the study of other scientific subjects. Where science is used to validate ideas, four out of five scientists preferring a brand of cigarettes or toothpaste, there is a tendency to accept the judgment as authoritative without asking the kinds of questions we might ask of other citizens' pronouncements. In *Human Biodiversity*, Marks has attempted to distill from a centuries-long debate what has been learned and remains to be learned about the biological differences within and among human groups. His is the first such attempt by an anthropologist in years for genetics has undermined the fundamental assumptions of racial taxonomy. The history of those assumptions from Linnaeus to the recent past, the history of other more useful assumptions that derive from Buffon and have reemerged to account for genetic variation, are the poles of Marks's exploration **Human Evolutionary Biology** Michael P. Muehlenbein, 2010-07-29 Wide ranging and inclusive, this text provides an invaluable

review of an expansive selection of topics in human evolution variation and adaptability for professionals and students in biological anthropology evolutionary biology medical sciences and psychology The chapters are organized around four broad themes with sections devoted to phenotypic and genetic variation within and between human populations reproductive physiology and behavior growth and development and human health from evolutionary and ecological perspectives An introductory section provides readers with the historical theoretical and methodological foundations needed to understand the more complex ideas presented later Two hundred discussion questions provide starting points for class debate and assignments to test student understanding *The Oxford Handbook of Human Mating* David M. Buss, 2023 The scientific study of human mating has mushroomed over the past three decades This handbook showcases the best and the brightest scientists in the field providing up to date summaries of theories and empirical evidence of the science of human mating strategies It includes major sections on theories of human mating mate selection and mate attraction mate competition sexual conflict in mating human pair bonding the endocrinology of mating and mating in the modern world Serials in the British Library , 2001
