The AIB International Consolidated Standards for Inspection are statements that represent key requirements that a facility must meet in order to keep products manufactured, processed or handled in a facility wholesome and safe. The Standards reflect what an inspector would expect to see in a facility that maintains a food-safe processing environment.

This report details the findings from an AIB International inspection against the Consolidated Standards. The document contains the following sections:

Document Section	Description
Score and Rating	x Description of the facility x Number of findings and related risks x Category scores and total score x Rating
Participant Names	Personnel from the facility who accompanied the inspector
Facility-Specific Questions	Technical information about a facility. For example: bulk materials used, temperature control equipment used.
Location Matrices	Two matrices which categorize findings by Category and Risk
Findings with Risk	Descriptions and recommendations related to all findings
Additional Comments	Comments made by the inspector that have no risk assessment

Pharmaceutical Master Validation Plan Syed Imtiaz

Haider, 2001-12-27 The Master Validation Plan provides a roadmap to management for on time start up of facility operations and validation of existing facilities in compliance with GMP requirements. The lack of a comprehensive Master Validation Plan and well documented validation procedures is the main reason that new drug medical device medical equipment and related product applications are rejected by the FDA. In fact only about 2% of the applications submitted by foreign pharmaceutical companies are approved each year. This thorough guide provides the needed solutions and guidance for both foreign and U.S. companies to achieve FDA compliance and authorization to market their products in the United States. **Pharmaceutical Master Validation Plan: The Ultimate Guide to FDA GMP and GLP Compliance** will allow you to more easily achieve satisfactory inspections, new medical product approval, minimize non-conformance, reduce rework and rejected lots, and avoid recall lots by developing and managing a Master Validation Plan. The accompanying CD allows users to input the template plan into their computers and tailor it to incorporate additional regulatory requirements specific to individual companies worldwide and print the required documents. Together the book and CD contain everything required to develop and execute a successful Master Validation Plan based on FDA guidelines for the pharmaceutical industry and allows the templates to be extended to diagnostic products, medical device, medical equipment, and biotech industry products. **The Handbook of**

Basic GMP Requirements Karyn Noemi Santoro, 2020-10-23 This Handbook of Basic GMP Requirements is a collection of official guidelines reported in the Eudralex website Volume 4. Specifically all nine chapters from Part I Basic Requirements for Medicinal Products are here reported. Since the pharmaceutical industry of the European Union maintains high standards of Quality Management in the development, manufacture, and control of medicinal products, a regulated system is required to ensure that all medicinal products are assessed by a competent authority to ensure compliance with contemporary requirements of safety, quality, and efficacy. Building a good quality system ensures not only that all products shipped around the European market are manufactured/imported only by authorised manufacturers but also that those activities are regularly inspected by the competent authorities using Quality Risk Management principles. Pharmaceutical industries must follow these guidelines and, thanks to their persistent effort, they will be able to successfully manufacture a high quality deliverable, stable medicine for human use and controlled according to quality standards appropriate to their intended use and as required by the marketing authorization. Good Manufacturing Practice guidelines aimed primarily at diminishing the risks inherent in any pharmaceutical production and not place the patient's health at risk due to inadequate safety, quality, or efficacy.
