Garcés,2024-09-17 The story of factory farmers rescued farm animals and rural communities standing up to big corporations and constructing their own new world that will change the way we eat In Transfarmation president and CEO of Mercy For Animals Leah Garc s explains how food and farming policies have failed over decades and offers insights into the wave of

change coming from a new crop of farmers and communities who are constructing a humane and sustainable farming system. Factory animal farming faces an abundance of issues from environmental concerns and animal cruelty to exploited farmers and poor working conditions and more and more farmers are searching for a way out and for a new start. Using insights from interviews and fieldwork, Garcia shares the perspectives of three groups. Farmers such as the Halley farm where a family crushed by chicken factory farming builds a new way by transitioning their farm to growing hemp and rescuing dogs. Animals like Norma, an industrial dairy cow who was sentenced to death after injuring a worker in an effort to protect her calf. Farm communities including stories like how the hog industry in North Carolina preys on historically Black communities by contaminating the air and water for decades with hog pollution. Garcia demonstrates the reasons why we must end factory farming and calls on readers to imagine a future world where transformation is complete and we have transitioned to a just food and farming system.

Business and Environmental Sustainability Sigrun M. Wagner, 2020-07-19. Environmental sustainability is increasingly important to organisations whether for regulatory, financial or ethical reasons. Business and Environmental Sustainability looks at the environmental aspect of sustainability for all organisations pursuing competitive advantage. The book provides theoretical foundations from science, economics, policy and strategy, introduces three environmental challenges: climate change, pollution and waste, and looks at how corporate functions can address these. This textbook provides a thorough foundation by introducing readers to the science, reasoning and theory behind environmental sustainability and then delves into how these ideas translate into principles and business models for organisations to use. Next, it covers environmental challenges from climate change, pollution and waste, and then goes on to examine the different corporate functions from supply chain management to human resources to illustrate how environmental sustainability is managed and put into practice in organisations. Finally, a set of integrative case studies draws everything together and enables the reader to apply various analytical tools with the aim of understanding how companies can not only reduce their environmental footprint but can positively contribute to environmental sustainability. Written by an award-winning lecturer, Business and Environmental Sustainability boasts a wealth of pedagogical features including examples from a range of industries and countries, plus a companion website with slides, quiz questions and instructor material. This will be a valuable text for students of business management and environmental sustainability and will also be suitable for broader courses on corporate responsibility and sustainability across environmental studies, political science and engineering.
