

Lesson 3.1 -- Using and Interpreting Function Notation

Graphs:

Can represent an equation, but not a function. The graph of a function must pass the vertical line test. If it fails, it is not a function.

Defining a function verbally:

Each input has exactly one output.

Defining a function numerically:

Each input has exactly one output.

Check Your Understanding

1. A graph of $y = f(x)$ is shown below.

a. What is $f(2)$?

b. What is $f(4)$?

c. What is the domain of f ?

$x \in [0, 5]$ where $f(x) \in [0, 4]$

2. Use this graph to answer the number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a. $f(1000) = 10$

At 1000 feet from the house, there are 10 people in the area.

b. $f(1000) = 1000$

At 1000 feet from the house, there are 1000 people in the area.

c. $f(1000) = 1000$

At 1000 feet from the house, there are 1000 people in the area.

d. $f(1000) = 10$

At 1000 feet from the house, there are 10 people in the area.

3. Engineers have discovered that there is a pattern, or rule, that can determine the heading distance a car travels as the car's speed when the car's speed, s , and time, t , are known.

a. Use this rule to predict the heading distance of a car moving through.

$s = 10$ mph

b. Write an equation for $f(s)$ that represents the car's heading distance when driving at a speed of s miles per hour.

$f(s) = \frac{s^2}{20}$

provides a comprehensive global overview of the latest research trends and practices in the teaching and learning of statistics Edited by Dani Ben Zvi Katie Makar and Joan Garfield this handbook brings together leading scholars to explore foundational theories innovative methodologies and emerging challenges in statistics education Covering topics such as statistical reasoning learning trajectories teacher development curriculum design and the role of technology the book serves as a critical resource for researchers educators curriculum developers and policymakers Rich with evidence based insights and international perspectives it offers both theoretical depth and practical applications making it an essential guide for advancing the field of statistics education Starting out in Statistics Patricia de Winter, Peter M. B. Cahusac, 2014-11-17 To form a strong grounding in human related sciences it is essential for students to grasp the fundamental concepts of statistical analysis rather than simply learning to use statistical software Although the software is useful it does not arm a student with the skills necessary to formulate the experimental design and analysis of a research project in later years of study or indeed if working in research This textbook deftly covers a topic that many students find difficult With an engaging and accessible style it provides the necessary background and tools for students to use statistics confidently and creatively in their studies and future career Key features Up to date methodology techniques and current examples relevant to the analysis of large data sets putting statistics in context Strong emphasis on experimental design Clear illustrations throughout that support and clarify the text A companion website with explanations on how to apply learning to related software packages This is an introductory book written for undergraduate biomedical and social science students with a focus on human health interactions and disease It is also useful for graduate students in these areas and for practitioners requiring a modern refresher **Inside Data Science** Philipp Brandt, 2025-12-02 Data scientists appeared suddenly in the early 2010s and quickly became ubiquitous Institutions from established corporations to start ups universities to government agencies scrambled to recruit specialists Somehow a loose band of computer experts and hackers integrated established technologies and methodologies and some questionable ideas into a distinct profession Where did data science come from and why did it gain broad recognition Inside Data Science examines how data scientists defined their professional role and identity offering an empirically rich and theoretically grounded account of the emergence of a new field Philipp Brandt met data science s early protagonists in New York City s start up spaces coffee shops and lecture halls where they displayed a puzzling combination of enthusiasm and uncertainty At these seemingly casual gatherings data scientists devised the machinery for seeing the world through datasets while also analyzing the social context of their technical work Retracing their conversations Brandt demonstrates how the data scientist role emerged from the collective processing of personal struggles navigating the uncharted space between statistical expertise and coding skills Offering a novel analytical lens and critical perspective on data science this book shows how the interplay of personal reflection technical rigor and collective scrutiny gave the big data era for better or for worse a human face Publications of the National Institute of Standards and
