

EARTH SCIENCE REGENTS

Station Models Tutorial

Copyright 1996 by S. Pogue

NAME _____
PERIOD _____

When you watch a weather report, the meteorologist describes the condition of the atmosphere at the present time, and makes a prediction about the future conditions that will exist in the atmosphere in the next 12 to 24 hours, and even for the next 5 days. Meteorologists get the data they need from *synoptic weather maps* - maps that show weather conditions from a number of weather stations around the country.

Individual weather stations report current conditions which are encoded on the map. This quick lab exercise will familiarize you with the information and method of encoding information on weather maps.

1. Make a list of all the conditions a meteorologist would include in a careful description of the current weather conditions. I've given you an easy one for a start.

Temperature _____
Dewpoint _____
Wind Speed _____
Wind Direction _____

Cloud Cover _____
precipitation amount _____
barometric trend (change in atmospheric pressure) _____
Current Atmospheric Pressure _____

2. Read Topics 13 and 14 on pages 509 and 510 in your text, and the "Weather Station Model" chart in the ESRT. Then, label what each feature on the station model drawn below represents:

3. There are probably a few things you thought might be included in the station model that aren't included here, and there are probably a few things here that you never thought of.
4. Use your text index to find, read about, and define the following terms:

dew point: *The temperature at which air is saturated with water vapor.* _____

relative humidity: *The extent to which air is saturated with water vapor; it is expressed as a percent.* _____

5. Find the long, narrow, vertical chart on your reference tables labeled "Pressure". What is the highest pressure (in millibars) labeled on that chart? 1041 mb

What is the lowest pressure, in millibars, labeled on the chart? 965 mb

The two pressures above are the approximate high and low limits of atmospheric air pressures that are observed at the earth's surface. Meteorologists take advantage of the limited range of observed pressures to encode them on the weather map.

Answers For Earth Science Plato:

Aristotle's Criticism of Plato's 'Timaeus' George S. Claghorn, 2012-12-06 The purpose of this study is to determine Aristotle's attitude toward the content and method of Plato's natural science. Plato and Aristotle have often been regarded as on opposite sides of a philosophic Great Divide. On the other hand, those who have found that the two men were in agreement have sometimes mentioned only scattered instances of that agreement. There is need for a new comparison of the two philosopher one which is limited in scope based on the primary texts and which is systematic and thorough in method. If successful, such a comparison would bring into sharp focus one phase of Aristotle's comments on Plato. Our attempt to meet this need is Aristotle's Criticism of Plato's TIMAEUS. In pursuing this study, it has been necessary to reject a number of uncritically accepted interpretations of the Timaeus. Contrary to the view of many, we have concluded that Aristotle largely agreed with Plato both in the principles and presuppositions of his natural science. A number of implications stem from this study. There is, for example, the oft-questioned manner in which Aristotle treated Plato's philosophy. In the great majority of instances, Aristotle stands forth as a reliable reporter and a skilled critic. Moreover, the study sheds light on that ancient riddle, whether Plato and Aristotle are basically akin or at odds in their general philosophies. *Myth and Metaphysics in Plato's Phaedo* David A. White, 1989 This study intends principally to isolate and describe the function of myth in the Phaedo in order to show its effect on the complex metaphysics developed throughout the dialogue. It further illustrates how these metaphysical concepts structure the dialogue's concluding eschatological myth. **The Dialogues of Plato** Plato, 1871

Astronomy: The Human Quest for Understanding Dale A. Ostlie, 2022-09-07 Since humans first looked up at the stars, astronomy has had a particular ability to stir the imagination and challenge the thinking of scientists and non-scientists alike. *Astronomy: The Human Quest for Understanding* is an introductory astronomy textbook specifically designed to relate to non-science majors across a wide variety of disciplines, nurture their curiosity, and develop vital science-based critical thinking skills. This textbook provides an introduction to how science operates in practice and what makes it so successful in uncovering nature's secrets. Given that the study of astronomy dates back thousands of years, it is the ideal subject for tracing the development of the physical sciences and how our evolving understanding of nature has influenced and been influenced by mathematics, philosophy, religion, geography, politics, and more. This historical approach also illustrates how wrong turns have been taken and how the inherent self-correcting nature of science through constant verification and the falsifiability of truly scientific theories ultimately leads us back to a more productive path in our quest for understanding. This approach also points out why, as a broadly educated citizenry, students of all disciplines must understand how scientists arrive at conclusions and how science and technology have become central features of modern society. In discussing this fascinating and beautiful universe of which we are a part, it is necessary to illustrate the fundamental role that mathematics plays in decoding nature's mysteries. Unlike other similar textbooks, some basic mathematics is integrated naturally into the text.

together with interpretive language and supplemented with numerous examples additional tutorials are provided on the book's companion website Astronomy The Human Quest for Understanding leads the reader down the path to our present day understanding of our Solar System stars galaxies and the beginning and evolution of our universe along with profound questions still to be answered in this ancient yet rapidly changing field
