Likewise, research has shown that various affective factors such as different emotions e.g. anxiety, self-concept, and interest need to be considered when investigating individual differences in learning. However, few studies have investigated both cognitive and affective factors simultaneously in relation to learning. In particular, there is a lack of studies investigating the interplay i.e. moderation and mediation between cognitive and affective factors on learning. The goal of this Research Topic is to deepen our knowledge on the relations between learning and both cognitive and affective factors in different age groups. We aim to provide a broad scope of emerging areas in research on cognitive and affective factors especially related to academic learning e.g. mathematics, reading, and other school subjects. Studies focusing simultaneously looking at the interplay of these constructs as well as longitudinally are of great interest. Further, we are interested in innovative study designs and recent advances in methodology in this field. To promote quality education for all and equity in education, cognitive and affective factors related to aspects of learning ranging from pre-school to tertiary provision and inclusion of individuals with special educational needs are of interest.
