Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i.e. teaching strategies but

they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

Mathematics Education Joseph Neal Payne, Frederick L. Goodman, 1965

South Korean Education and Learning Excellence as a Hallyu Young Chun Kim, Jae-seong Jo, Jung-Hoon Jung, 2023-08-11

This book constitutes a sociological, anthropological and curricular inquiry into the factors surrounding high academic achievement rates of students in South Korea. Taking root in similar studies conducted around the exemplary nature of the Finnish education model, it explores the phenomenon of success in South Korea, uniquely connecting it to the scholarship and models for examining the recent shift in attention and popularity of Korean culture. The authors argue that Korean education or K-edu can also be studied and understood as a Hallyu and an exemplary form of education. Drawing on longitudinal qualitative studies spanning over 15 years, the authors advance understandings of Korean academic success beyond more generalized understandings of how Asian students learn and towards a holistic explanation for the case of Korea. As such, the book challenges the perception of Korean students as passive learners with a controlled learning culture and instead advocates the ways in which Korean students are leading a changing culture by utilizing all available resources and opportunities in the space of South Korea's evolving ecological system of education. In addition, this book provides one explanation as to how students from East Asian countries achieve such excellent academic performance. A crucial exploration of the culture and growth of education systems in Asian countries, this book will appeal to scholars and researchers with interests in Korean education and Korean students' academic achievement as an emerging inquiry for both Korean studies and East Asian Cultural Studies. In addition, this book will also be informative for scholars of comparative education, sociology of education, educational policy and postcolonial educational research in the world.
