Managing Business Complexity Michael J. North, Charles M. Macal, 2007-03-01 Agent based modeling and simulation ABMS a way to simulate a large number of choices by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making Managing Business Complexity is the first complete business oriented agent based modeling and simulation resource It has three purposes first to teach readers how to think about ABMS that is about agents and their interactions second to teach readers how to explain the features and advantages of ABMS to other people and third to teach

readers how to actually implement ABMS by building agent based simulations It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter It is also a collection of ABMS business applications resources all assembled in one place for the first time In short Managing Business Complexity addresses who needs ABMS and why where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models
