

Algebraic Proof Worksheet

- Algebraic proofs are two column proofs of standard algebra problems that are solved with reasons for each step. The reasons are from the properties below:

Properties of Equality for Real Numbers	
Reflexive	For every a , $a = a$
Symmetric	For all numbers a and b , if $a = b$, then $b = a$
Transitive	For all numbers a , b , and c , if $a = b$ and $b = c$, then $a = c$
Addition & Subtraction	For all numbers a , b , and c , if $a = b$, then $a + c = b + c$ and $a - c = b - c$
Multiplication & Division	For all numbers a , b , and c , if $a = b$, then $ac = bc$ and if $c \neq 0$, $a/c = b/c$
Substitution	For all numbers a and b , if $a = b$, then a may be replaced by b in any equation or expression
Distributive	For all numbers a , b , and c , $a(b + c) = ab + ac$

Given: $5x - 14 = 2x + 16$

Prove: $x = 10$

Statement	Reason
$5x - 14 = 2x + 16$	Given
$+ 14 = +14$	Addition POE
$5x = 2x + 30$	Substitution (Simplify)
$-2x = -2x$	Subtraction POE
$3x = 30$	Substitution (Simplify)
$\div 3 = \div 3$	Division POE
$x = 10$	Substitution (Simplify)

Remember, after an addition, subtraction, multiplication or division, the next step is always a simplification or substitution step. Now use this example to finish all the problems on the back..

The History of Mathematical Proof in Ancient Traditions Karine Chemla, 2012-07-05 This radical profoundly scholarly book explores the purposes and nature of proof in a range of historical settings It overturns the view that the first mathematical proofs were in Greek geometry and rested on the logical insights of Aristotle by showing how much of that view is an artefact of nineteenth century historical scholarship It documents the existence of proofs in ancient mathematical writings about numbers and shows that practitioners of mathematics in Mesopotamian Chinese and Indian cultures knew how to prove the correctness of algorithms which are much more prominent outside the limited range of surviving classical Greek texts that historians have taken as the paradigm of ancient mathematics It opens the way to providing the first comprehensive textually based history of proof **Key Maths GCSE**, 2003 Developed for the CCEA Specification this Teacher File contains detailed support and guidance on advanced planning points of emphasis key words notes for the non specialist useful supplementary ideas and homework sheets **Discrete Algorithmic Mathematics,**

Proofs of the Cantor-Bernstein Theorem Arie Hinkis, 2013-02-26 This book offers an excursion through the developmental area of research mathematics It presents some 40 papers published between the 1870s and the 1970s on proofs of the Cantor Bernstein theorem and the related Bernstein division theorem While the emphasis is placed on providing accurate proofs similar to the originals the discussion is broadened to include aspects that pertain to the methodology of the development of mathematics and to the philosophy of mathematics Works of prominent mathematicians and logicians are reviewed including Cantor Dedekind Schröder Bernstein Borel Zermelo Poincaré Russell Peano the Königs Hausdorff Sierpinski Tarski Banach Brouwer and several others mainly of the Polish and the Dutch schools In its attempt to present a diachronic narrative of one mathematical topic the book resembles Lakatos' celebrated book Proofs and Refutations Indeed some of the observations made by Lakatos are corroborated herein The analogy between the two books is clearly anything but superficial as the present book also offers new theoretical insights into the methodology of the development of mathematics proof processing with implications for the historiography of mathematics

Proof Technology in Mathematics Research and Teaching Gila Hanna, David A. Reid, Michael de Villiers, 2019-10-02 This book presents chapters exploring the most recent developments in the role of technology in proving The full range of topics related to this theme are explored including computer proving digital collaboration among mathematicians mathematics teaching in schools and universities and the use of the internet as a site of proof learning Proving is sometimes thought to be the aspect of mathematical activity most resistant to the influence of technological change While computational methods are well known to have a huge importance in applied mathematics there is a perception that mathematicians seeking to derive new mathematical results are unaffected by the digital era The reality is quite different Digital technologies have transformed how mathematicians work together how proof is taught in schools and universities and even the nature of proof itself Checking billions of cases in extremely large but finite sets impossible a few decades ago has now become a standard method of proof Distributed proving by teams of mathematicians working independently on sections of a problem has become very much easier as digital communication facilitates the sharing and comparison of results Proof assistants and dynamic proof environments have influenced the verification or refutation of conjectures and ultimately how and why proof is taught in schools And techniques from computer science for checking the validity of programs are being used to verify mathematical proofs Chapters in this book include not only research reports and case studies but also theoretical essays reviews of the state of the art in selected areas and historical studies The authors are experts in the field
