Glasser, 2005-05-20 Field Techniques in Glaciology and Glacial Geomorphology is the first text to provide this essential information in a single comprehensive volume Coverage includes The role of field data acquisition in the broader disciplines of glaciology and glacial geomorphology Logistical preparations for fieldwork Field techniques in glaciology such as investigations on ice and meltwaters Field techniques in glacial geomorphology ranging from investigations on glacial landforms and sediments International case studies show each method in practice *Methods in Lignin Chemistry* Stephen Y. Lin, Carlton W. Dence, 2012-12-06 The structural complexity of lignin has continually challenged the ingenuity of researchers to develop suitable methods for its characterization prior to and following a wide variety of chemical biological and physical treatments Initially activity along these lines was fueled by a desire to interpret technical delignification Le pulping processes in terms of accompanying structural changes in the lignin Subsequently increasingly wide ranging in depth investigations on the structure and reactivity of lignin exposed the inadequacy of many of the methods currently in use and underscored the ever continuing need to develop new methods capable of solving the unique analytical problems associated with lignin Characteristically such methods should be selective sensitive suitable for quantitative measurements and capable of being applied directly to and without destruction of the lignin or lignocellulose sample One notable example of the headway being made in reaching this objective is the relatively recent development and refinement of methods based on the use of sophisticated instrumentation e g ^1H and ^{13}C NMR spectroscopy Although the utility of many of these and other recently developed methods described in this book has yet to be fully and satisfactorily exploited we believe that progress already made in this direction will continue and most likely accelerate The decision to produce this book was prompted mainly by the acknowledged need for an up to date single source compilation of lignin methodology Hitherto this need was in part satisfied

Martínez Vidal, 2007-10-26 A comprehensive collection of robust methods for the detection of pesticide compounds or their metabolites useful in food environmental and biological monitoring and in studies of exposure via food water air and the skin or lungs The readily reproducible methods range from gas and liquid chromatography coupled to mass spectrometry detection and other classic detectors to capillary electrophoresis and immunochemical or radioimmunoassay methods The authors have focused on extraction and cleanup procedures in order to develop and optimize more fully automated and miniaturized methods including solid phase extraction solid phase microextraction microwave assisted extraction and on line tandem liquid chromatography LC LC trace enrichment among others The protocols offer step by step laboratory instructions an introduction outlining the principles behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls ICES Zooplankton Methodology Manual Roger Harris, Peter Wiebe, Jürgen Lenz, Hein-Rune Skjoldal, Mark Huntley, 2000-02-14 The term zooplankton describes the community of floating often microscopic animals that inhabit aquatic environments Being near the base of the food chain they serve as food for larger animals such as fish The ICES International Council for the Exploration of the Sea Zooplankton Methodology Manual provides comprehensive coverage of modern techniques in zooplankton ecology written by a group of international experts Chapters include sampling acoustic and optical methods estimation of feeding growth reproduction and metabolism and up to date treatment of population genetics and modeling This book will be a key reference work for marine scientists throughout the world Sampling and experimental design Collecting zooplankton Techniques for assessing biomass and abundance Protozooplankton enumeration and biomass estimation New optical and acoustic techniques for estimating zooplankton biomass and abundance Methods for measuring zooplankton feeding growth reproduction and metabolism Population genetic analysis of zooplankton Modelling zooplankton dynamics This unique and comprehensive reference work will be essential reading for marine and freshwater research scientists and graduates entering the field **Advances in Biological Solid-State NMR** Frances Separovic, Akira Naito, 2014 The complexity and heterogeneity of biological systems has posed an immense challenge in recent years An increasingly important tool for obtaining molecular and atomic scale information on a range of large biological molecules and cellular components is solid state NMR This technique can address fascinating problems in structural biology including the arrangement of supramolecular complexes and fibril formation in relation to molecular folding misfolding and aggregation Advances in Biological Solid State NMR brings the reader up to date with chapters from international leaders of this growing field covering the most recent developments in the methodology and applications of solid state NMR to studies of membrane interactions and molecular motions A much needed discussion of membrane systems is detailed alongside important developments in in situ analysis Topics include applications to biological membranes membrane active peptides membrane proteins protein assemblies and in cell NMR This exposition of an invaluable technique will interest those working in a range

of related spectroscopic and biological fields A basic introduction invites those interested to familiarise themselves with the basic mathematical and conceptual foundations of solid state NMR A thorough and comprehensive discussion of this promising technique follows which is essential reading for those working or studying at postgraduate level in this exciting field
