Our research findings will be presented at a full day lecture series and a poster session at the 2009 American Psychological Association meeting in San Francisco, CA.

For these reasons and the reasons given above, the Commission considers that the aid is effective in favour of the company concerned.

1. The supply curve for the market is upward sloping, as the market expands, another firm enters the market and the resulting increase in price increases the quantity supplied. The upward-sloping supply curve intersects the horizontal price line at the equilibrium price and quantity. The market is in long-run equilibrium.

2. 
The graph shows a coordinate system with Price (\$) on the vertical axis and Quantity on the horizontal axis. A horizontal line is drawn at Price = 10. An upward-sloping curve, labeled 'Supply', starts from the bottom left and goes towards the top right. The intersection of the horizontal line and the supply curve is marked with a dot and labeled 'Equilibrium'. Dashed lines from this point lead to '10' on the vertical axis and '100' on the horizontal axis. The supply curve passes through points (0, 5), (50, 10), and (150, 15).

3. In the long run, the market is in equilibrium at a price of \$10 and a quantity of 100. The market is in long-run equilibrium because the price is equal to the marginal cost of production, and the quantity supplied is equal to the quantity demanded.
