

1. The random variable X has mean 296 and standard deviation 72.

(a) Describe fully the distribution of the mean of a random sample of 64 values of X . [3]

We need to define the distribution of the sample mean. We don't know the distribution of the population, however, our sample size 64 is large enough for us to use CLT to approximate a normal distribution,

$$\begin{aligned}\bar{X} &\sim N\left(296, \frac{72^2}{64}\right) \\ \bar{X} &\sim N(296, 81)\end{aligned}$$

Therefore, the final answer is,

$\bar{X}$ is normally distributed with mean 296 and standard deviation 9.

(b) The distribution in part (a) might be either exact or approximate. State a condition under which the distribution is exact. [1]

In part a we used CLT to approximate a normal distribution because we didn't know the distribution of the population. If the population X followed a normal distribution then the sample mean $\bar{X}$ would follow an exact normal distribution.
