Q1(B)

1	Correct. Angle of deflection is proportional to $\frac{q}{m}$. Since $m_{\text{electron}} < m_{\text{proton}}$, electrons have a greater angle of deflection and are deflected to a larger extent than protons.
2	Correct. Electrons are attracted to the positive plate while protons are attracted to the negative plate i.e. the electron beam are deflected in the opposite direction to the proton beam.
3	Incorrect. The proton beams will travel in a curve path towards the negative plate.

Q2(D)

Q in the ionic nitrate, QNO_3^- , exists as Q^+ .
 Since Q^+ has 80 electrons, Q has 81 electrons and 81 protons. From the Periodic table, Q is the element thallium which belongs to group 13.

The nucleon number of Q is $81 + 122 = 203$.

Q3(C)

A	Incorrect. 2^{nd} IE of F : $\text{F}^+ \longrightarrow \text{F}^{2+} + \text{e}^-$ $[\text{He}]2s^22p^4 \quad [\text{He}]2s^22p^3$ 3^{rd} IE of Al : $\text{Al}^{2+} \longrightarrow \text{Al}^{3+} + \text{e}^-$ $[\text{Ne}]3s^1 \quad [\text{Ne}]$ 2^{nd} IE of F is greater because the electrons are removed from an inner electronic shell.												
B	Incorrect <table border="1"> <thead> <tr> <th>3^{rd} IE of</th><th>electron removed from</th></tr> </thead> <tbody> <tr> <td>F</td><td>2p</td></tr> <tr> <td>Ne</td><td>2p</td></tr> <tr> <td>Na</td><td>2p</td></tr> <tr> <td>Mg</td><td>2p</td></tr> <tr> <td>Al</td><td>3s</td></tr> </tbody> </table>	3^{rd} IE of	electron removed from	F	2p	Ne	2p	Na	2p	Mg	2p	Al	3s
3^{rd} IE of	electron removed from												
F	2p												
Ne	2p												
Na	2p												
Mg	2p												
Al	3s												

Correct.

C Na^{3+} and Ne^{2+} have the same electronic configuration and experience the same shielding effect. 4^{th} IE of Na is greater due to the greater nuclear charge of Na which causes the 2p electrons of Na^{3+} to experience a greater effective nuclear charge and greater attraction from the nucleus, requiring more energy to remove.

D Incorrect. Successive IE's always increase even if the electrons are removed from different shells.

D Successive IE's always increase as an electron is removed from a species of increasing positive charge and does not depend on which

Q4(B)

Since there is a large jump between the 7^{th} and 8^{th} IE for element W, the 8^{th} electron is removed from an inner shell i.e. W has 7 valence electrons and is from group 17.

Since W, X, Y and Z are consecutive elements, X is from group 18, while elements Y and Z are from groups 1 and 2 of the next period respectively.

X, the group 18 element, has a higher first IE than W, the group 17 element of the same period since IE increases across the period.

X also has the higher first IE than Y and Z since Y and Z are from the next period and their valence electrons are further away from the nucleus.

Sea Level Variability and Change Ivan D. Haigh, Marta Marcos, Sönke Dangendorf, Francisco Calafat, 2017-04-27 In June 2015 we held a workshop on the beautiful island of Mallorca Spain with a focus on sea level variability and change Over 120 sea level experts from around the world attended this workshop from a range of different disciplines The main aims of the workshop were to 1 Evaluate the current state of knowledge of sea level science 2 Identify gaps and unresolved questions in any aspect of sea level science and 3 Design future research to address these issue All aspects of sea level changes were covered from global to regional observations and modelling processes driving mean sea level changes and extremes from the geological scale to the instrumental era and future projections and including impacts on the coastal zones This E Book presents papers that came out of that workshop Overall these papers illustrate the multi disciplinary nature of sea level research cross cutting many fields of research including oceanography meteorology geology coastal morphodynamics engineering and the social economic aspects Collectively theses articles represent an interesting range of perspectives and original studies that contribute to understanding the dynamic nature of sea level and its impacts across a wide range of time and space scales Enjoy reading them

Tsunami Mohammad Mokhtari, 2016-10-12 This book is a collection of contribution from experts involved in tsunami study for the purpose of covering its different aspects from generation to warning system to be applied in tsunami risk reduction The presented chapters have been peer reviewed and accepted for publication The content

of the book consists of information on tsunami propagation from the open sea to the coast and coastal tsunami warning using deployed HF radar systems in different parts of North America and Japan In this book tsunami propagation preliminary methods for evaluating the suitability of radar sites for tsunami detection using simulated tsunami velocities and factors affecting tsunami detectability are discussed and methods for reducing the false alarms are described It further covers multi scale meteorological systems resulted in meteo tsunami and tsunami generation due to a landslide or a submarine volcanic eruption where few case studies have been presented The occurrence and characteristics of tsunami in Sweden using paleo tsunami events from different parts of the Scandinavia and finally challenges and opportunities for reducing losses to fast arriving tsunamis in remote villages along Pakistan coast with few examples are also discussed

Probabilistic Tsunami Hazard and Risk Analysis Katsuichiro Goda,Raffaele De Risi,Aditya Riadi Gusman,Ioan Nistor,2024-10-31 Probabilistic Tsunami Hazard and Risk Analysis Towards Disaster Risk Reduction and Resilience covers recent calls for advances in quantitative tsunami hazard and risk analyses for the synthesis of broad knowledge basis and solid understanding of interdisciplinary fields spanning seismology tsunami science and coastal engineering These new approaches are essential for enhanced disaster resilience of society under multiple hazards and changing climate as tsunamis can cause catastrophic loss to coastal cities and communities globally This is a low probability high consequence event and it is not easy to develop effective disaster risk reduction measures In particular uncertainties associated with tsunami hazards and risks are large The knowledge and skills for quantitative probabilistic tsunami hazard and risk assessments are in high demand and are required in various related fields including disaster risk management governments and local communities and the insurance and reinsurance industry catastrophe model Focuses on fundamentals on probabilistic tsunami hazard and risk analysis Includes case studies covering a wide range of applications related to tsunami hazard and risk assessments Covers tsunami disaster risk management

Regulation and targeting of enzymes mediating Parkinson's disease pathogenesis: focus on Parkinson's disease Kinases, GTPases and ATPases Jean-Marc Taymans,Veerle Baekelandt,Kirsten Harvey,2015-02-11 Understanding the molecular pathogenesis of Parkinson s disease PD is a priority in biomedical research and a pre requisite to improve early disease diagnosis and ultimately to developing disease modifying strategies In the past decade and a half geneticists have identified several genes that are involved in the molecular pathogenesis of PD They not only identified gene variants segregating with familial forms of PD but also genetic risk factors of sporadic PD via genome wide association studies GWAS Understanding how PD genes and their gene products function holds the promise of unraveling key PD pathogenic processes Therefore the precise cellular role of PD proteins is currently the subject of intense investigation Interestingly a number of PD proteins have enzymatic functions including kinase GTPase or ATPase functions In the context of understanding disease pathogenesis or developing disease modifying therapies enzymes possess several useful features Firstly enzymes are often key elements of cellular signaling networks acting as on off switches to determine signaling intensity For instance kinases

mediate phosphorylation events which activate or inactivate their substrates while GTPases modulate activity of their effector proteins via direct interaction in a GDP GTP dependent manner ATPases also control cellular processes through their involvement in cellular energy production and or in transmembrane transport Secondly enzymes are attractive targets for therapeutics development This is exemplified by the growing number of kinase inhibitors approved for clinical use while compounds modulating GTPases or ATPases have also been proposed as potential therapeutics Finally as elements in cellular signaling networks enzymes are not generally constitutively active but subject to further regulation through additional signaling components Knowledge of how PD kinases GTPases and ATPases are activated or inactivated can aid in understanding how PD signaling networks are deregulated in disease and point to new possibilities in targeting pathological signaling processes The objective of this research topic is to provide an overview of current knowledge on the regulation of cellular signaling networks of PD kinases GTPases and ATPases Both upstream and downstream signaling events will be covered with a focus on molecular events that can readily be monitored relevance as disease biomarkers and have a potential to be modulated relevance as potential therapeutic target Environmental Administrative Decisions: February 2016 to June 2019 United States. Recombinant protein expression in microbial systems Eduardo A. Ceccarelli,Germán L. Rosano,2014-10-02 With the advent of recombinant DNA technology expressing heterologous proteins in microorganisms rapidly became the method of choice for their production at laboratory and industrial scale Bacteria yeasts and other hosts can be grown to high biomass levels efficiently and inexpensively Obtaining high yields of recombinant proteins from this material was only feasible thanks to constant research on microbial genetics and physiology that led to novel strains plasmids and cultivation strategies Despite the spectacular expansion of the field there is still much room for progress Improving the levels of expression and the solubility of a recombinant protein can be quite challenging Accumulation of the product in the cell can lead to stress responses which affect cell growth Buildup of insoluble and biologically inactive aggregates inclusion bodies lowers the yield of production This is particularly true for obtaining membrane proteins or high molecular weight and multi domain proteins Also obtaining eukaryotic proteins in a prokaryotic background for example plant or animal proteins in bacteria results in a product that lack post translational modifications often required for functionality Changing to a eukaryotic host yeasts or filamentous fungi may not be a proper solution since the pattern of sugar modifications is different than in higher eukaryotes Still many advances in the last couple of decades have provided to researchers a wide variety of strategies to maximize the production of their recombinant protein of choice Everything starts with the careful selection of the host Be it bacteria or yeast a broad list of strains is available for overcoming codon use bias incorrect disulfide bond formation protein toxicity and lack of post translational modifications Also a huge catalog of plasmids allows choosing for different fusion partners for improving solubility protein secretion chaperone co expression antibiotic resistance and promoter strength Next controlling culture conditions like temperature

inducer and media composition can bolster recombinant protein production With this Research Topic we aim to provide an encyclopedic account of the existing approaches to the expression of recombinant proteins in microorganisms highlight recent discoveries and analyze the future prospects of this exciting and ever growing field *Green Finance and Investment Inventory of Energy Subsidies in the EU's Eastern Partnership Countries* OECD,2018-06-04 This publication aims to provide the first comprehensive and consistent record of energy subsidies in the EaP region with a view to improving transparency and establishing a solid analytical basis that can help build the case for further reforms in these countries
