### **Europe and Central Asia Economic Update, Fall 2021**

World Bank, 2021-10-05 Although global economic activity is recovering and output in Europe and Central Asia ECA is expected to grow in 2021 containing COVID 19 remains a challenge in the region Enterprise survey data for the emerging and developing countries in the region show that COVID 19 had a profound and heterogeneous impact on firms Smaller younger and female run businesses were hit harder and had greater difficulty recovering But the crisis also played a cleansing role and economic activity in ECA appears to have been reallocated toward more productive firms during the crisis particularly in countries with more competitive markets Firms with high pre crisis labor productivity experienced significantly smaller drops in sales and employment than firms with low pre crisis labor productivity and were also more likely to adapt to the crisis by increasing online activity and remote work Many governments in ECA implemented broad policy support schemes to address the initial economic fallout from the crisis Overall this government support was more likely to go to less productive and larger firms regardless of the level of their pre crisis innovation As economies enter the economic recovery phase it will be important for policy makers in all countries to phase out broad policy support measures as soon as appropriate and focus on fostering a competitive business environment which is key to a strong recovery resilience to future crises and sustainable long term economic growth

*Chance Encounters* Kristien Hens, 2022-12-09 In this rigorous and necessary book Kristien Hens brings together bioethics and the philosophy of biology to argue that it is ethically necessary for scientific research to include a place for the philosopher As well as ethical their role is conceptual they can improve the quality and coherence of scientific research by ensuring that particular concepts are used consistently and thoughtfully across interdisciplinary projects Hens argues that chance and uncertainty play a central part in bioethics but that these qualities can be in tension with the attempt to establish a given theory as scientific knowledge in describing

organisms and practices in a sense we create the world Hens contends that this is necessarily an ethical activity Examining genetic research biomedical ethics autism research and the concept of risk Hens illustrates that there is no universal or neutral state of scientific and clinical knowledge and that attending to the situatedness of individual experience is essential to understand the world around us to know its and our limitations and to forge an ethical future Chance Encounters is aimed at a broad audience of researchers in bioethics philosophy anthropology sociology as well as biomedical and environmental scientists It will also be relevant to policymakers and the artwork by Christina Stadlbauer and Bartaku will be of interest to artists and writers working at the intersection of art and science

**Silicon Nanophotonics** Leonid Khriachtchev, 2016-10-26 Photonics is a key technology of this century The combination of photonics and silicon technology is of great importance because of the potentiality of coupling electronics and optical functions on a single chip Many experimental and theoretical studies have been performed to understand and design the photonic properties of silicon nanocrystals Generation of light in silicon is a challenging perspective in the field however the issue of light emitting devices does not limit the activity in the field Research is also focused on light modulators optical waveguides and interconnectors optical amplifiers detectors memory elements photonic crystals etc A particularly important task of silicon nanostructures is to generate electrical energy from solar light Understanding the optical properties of silicon based materials is central in designing photonic components It is not possible to control the optical properties of nanoparticles without fundamental information on their microscopic structure which explains a large number of theoretical works on this subject Many fundamental and practical problems should be solved in order to develop this technology In addition to open fundamental questions it is even more difficult to develop the known experimental results towards practical realization However the world market for silicon photonics is expected to be huge thus more research activity in the field of silicon nanophotonics is expected in the future This book describes different aspects of silicon nanophotonics from fundamental issues to practical devices The second edition is essentially different from the book published in 2008 Eight chapters of the first edition are not included in the new book because the recent progress on those topics has not been large enough Instead seven new chapters appear The other eight chapters are essentially modified to describe recent achievements in the field
